

MM5368 CMOS Oscillator Divider Circuit

General Description

The MM5368 is a CMOS integrated circuit generating 50 or 60 Hz, 10 Hz, and 1 Hz outputs from a 32 kHz crystal (32,768 Hz). For the 60 Hz selected output the input time base is divided by 546.133, for the 50 Hz mode it is divided by 655.36. The 50/60 Hz output is then divided by 5 or 6 to obtain a 10 Hz output which is further divided to obtain a 1 Hz output. The 50/60 Hz select input can be floated for a counter reset.

Features

- 50/60 Hz output
- 1 Hz output
- 10 Hz output
- Low power dissipation
- Fully static operation
- Counter reset
- 3.5V–15V supply range
- On-chip oscillator—tuning and load capacitors are the only required external components besides the crystal. (For operation below 5V it may be necessary to use an $\sim 1\text{ M}\Omega$ pullup on the oscillator output to insure start-up.)

Absolute Maximum Ratings

If Military/Aerospace specified devices are required, please contact the National Semiconductor Sales Office/Distributors for availability and specifications.

Voltage at Any Pin $-0.3V$ to $V_{DD} + 0.3V$
 Operating Temperature $0^{\circ}C$ to $+70^{\circ}C$
 Storage Temperature $-65^{\circ}C$ to $+150^{\circ}C$

Maximum V_{DD} Voltage 16V
 Operating V_{DD} Range $3.5V \leq V_{DD} \leq 15V$
 Lead Temperature (Soldering, 10 sec.) $300^{\circ}C$

Electrical Characteristics T_A within operating range, $V_{SS} = 0V$

Parameter	Conditions	Min	Typ	Max	Units
Quiescent Current Drain	$V_{DD} = 15V$; 50/60 Select Floating			10	μA
Operating Current Drain	$f_{IN} = 32 kHz$, $V_{DD} = 3.5V$			60	μA
	$f_{IN} = 32 kHz$, $V_{DD} = 15V$			1500	μA
Maximum Input Frequency	$V_{DD} = 3.5V$			64	kHz
	$V_{DD} = 15V$			500	kHz
Output Current Levels	$V_{DD} = 5V$				
	Logical "1", Source			-400	μA
	Logical "0", Sink	400			μA
	$V_{OH} = V_{SS} + 2.7V$ $V_{OL} = V_{SS} + 0.4V$ $V_{DD} = 9V$				
Output Current Levels	$V_{DD} = 15V$				
	Logical "1", Source			-1500	μA
	Logical "0", Sink	1500			μA
	$V_{OH} = V_{SS} + 6.7V$ $V_{OL} = V_{SS} + 0.4V$				
Input Current Levels	50/60 Select Input (Note 1)				
	Logical "1" (I_{IH})			50	μA
	Logical "1" (I_{IH})			3	mA
	Logical "0" (I_{IL})			20	μA
	Logical "0" (I_{IL})			1	mA

Note 1: The input current level test is performed by first measuring the open circuit voltage at the 50/60 Hz select pin. If the voltage is "high", make the I_{IH} test. If the voltage is "low", make the I_{IL} test. The state of the 50/60 Hz select pin may be changed by applying a pulse to OSC IN (pin 6) while the 50/60 Hz pin is open circuit.

Functional Description (Figure 1)

The MM5368 initially divides the input time base by 256. From the resulting frequency (128 Hz for 32 kHz crystal) 8 clock periods are dropped or eliminated during 60 Hz operation and 28 clock periods are eliminated during 50 Hz operation. This frequency is then divided by 2 to obtain a 50 or 60 Hz output. This output is not periodic from cycle to cycle; however, the waveform repeats itself every second. Straight divide by 5 or 6 and 10 are used to obtain the 10 Hz output and the 1 Hz outputs.

The 60 Hz mode is obtained by tying pin 7 to V_{DD} . The 60 Hz output waveform can be seen in Figure 3. The 10 Hz

and 1 Hz outputs have an approximate 50% duty cycle. In the 50 Hz mode the 50/60 select input is tied to V_{SS} . The 50 Hz output waveform can be seen in Figure 3. The 10 Hz output has an approximate 40% duty cycle and the 1 Hz output has an approximate 50% duty cycle.

For the 50/60 Hz select input floating, the counter chain is held reset, except for the initial toggle flip-flop which is needed for the reset function. A reset may also occur when the input is switched (Figure 4). To insure the floating state, current sourced from the input must be limited to $1.0 \mu A$ and current sunk by the input must be limited to $1.0 \mu A$ for $V_{DD} = 3.5V$.
