

ICS552-02

LOW SKEW 2 INPUT MUX AND 1 TO 8 CLOCK BUFFER

Description

The ICS552-02 is a low skew, single-input to eight-output clock buffer. The device offers a dual input with pin select for glitch-free switching between two clock sources. It is part of ICS' ClockBlocks™ family. See the ICS553 for a 1 to 4 low skew buffer. For more than 8 outputs see the MK74CBxxx Buffalo™ series of clock drivers.

ICS makes many non-PLL and PLL based low skew output devices as well as Zero Delay Buffers to synchronize clocks. Contact us for all of your clocking needs.

Features

- Extremely low skew outputs (50ps maximum)
- Packaged in 16 pin TSSOP
- Available in Pb (lead) free package
- Low power CMOS technology
- Operating Voltages of 2.5 V to 5 V
- Output Enable pin tri-states outputs
- 5 V tolerant input clocks
- Input/Output clock frequency up to 200 MHz
- Input clock multiplexer simplifies clock selection
- Industrial temperature

Pin Descriptions

Pin Number	Pin Name	Pin Type	Pin Description
1	OE	Input	Output Enable. Tri-states outputs when low. Internal pull-up resistor.
2	VDD	Power	Connect to +2.5V, +3.3V or +5.0V. Must be the same as pin 15.
3	Q0	Output	Clock Output 0
4	Q1	Output	Clock Output 1
5	Q2	Output	Clock Output 2
6	Q3	Output	Clock Output 3
7	GND	Power	Connect to ground.
8	INB	Input	Clock Input B. 5V tolerant input.
9	INA	Input	Clock Input A. 5V tolerant input.
10	GND	Power	Connect to ground.
11	Q4	Output	Clock Output 4
12	Q5	Output	Clock Output 5
13	Q6	Output	Clock Output 6
14	Q7	Output	Clock Output 7
15	VDD	Power	Connect to + 2.5V, +3.3V or +5.0V. Must be the same as pin 2.
16	SELA	Input	Selects either INA or INB. Internal pull-up resistor.

External Components

A minimum number of external components are required for proper operation. Decoupling capacitors of 0.01 μ F should be connected between VDD on pin 2 and GND on pin 7, and between VDD on pin 15 and GND on pin 10, as close to the device as possible. A 33 Ω series terminating resistor should be used on each clock output if the trace is longer than 1 inch.

To achieve the low output skews that the ICS552-02 is capable of, careful attention must be paid to board layout. Essentially, all 8 outputs must have identical terminations, identical loads, and identical trace geometries. If they do not, the output skew will be degraded. For example, using a 30 Ω series termination on one output (with 33 Ω on the others) will cause at least 15ps of skew.

Absolute Maximum Ratings

Stresses above the ratings listed below can cause permanent damage to the ICS552-02. These ratings, which are standard values for ICS commercially rated parts, are stress ratings only. Functional operation of the device at these or any other conditions above those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods can affect product reliability. Electrical parameters are guaranteed only over the recommended operating temperature range.
