

## FEATURES

- 4 to 20dB Gain Range
- 1 dB Step Size  $\pm 0.2$  dB
- Differential input and output
- 150  $\Omega$  Differential Input
- Open Collector Differential Output
- 8dB noise figure @ maximum gain
- OIP3 of  $\sim 50$  dBm at 140MHz
- 3 dB bandwidth of 690 MHz
- Parallel 5-bit Control Interface
- Wide input dynamic range
- Power-down feature
- Single 5V Supply Operation
- 24 Lead LFCSP 4 x 4 mm Package

## APPLICATIONS

- Differential ADC drivers
- High IF Sampling Receivers
- High Output Power IF Amplification
- Instrumentation

## GENERAL DESCRIPTION

The AD8375 is a digitally controlled, variable gain wide bandwidth amplifier that provides precise gain control, high IP3 and low noise figure. The excellent distortion performance and high signal bandwidth makes the AD8375 an excellent gain control device for a variety of receiver applications.

For wide input dynamic range applications, the AD8375 provides a broad 24dB gain range with 1 dB resolution. The gain is adjusted through a 5-pin control interface and can be driven using standard TTL levels. The open-collector outputs provide a flexible interface, allowing the overall signal gain to be set by the loading resistance. The AD8375 offers a maximum transconductance gain of 67 m $\Omega$ <sup>-1</sup>s, resulting in a signal gain of 20dB when driving a 150-Ohm load. The maximum signal gain increases to  $\sim 24$ dB when driving a 250-Ohm differential load.

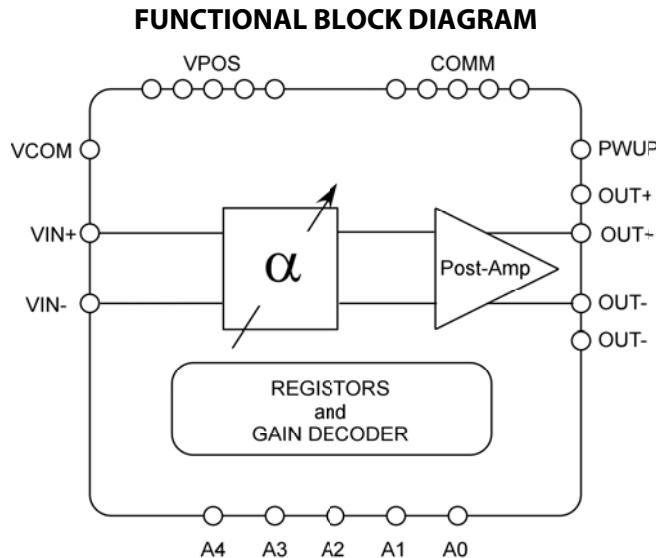

Figure 1.

Using a high speed SiGe process and incorporating proprietary distortion cancellation techniques, the AD8375 achieves 50 dBm output IP3 at 140 MHz.

The AD8375 is powered on by applying the appropriate logic level to the PWUP pin. The quiescent current of the AD8375 is typically 130mA. When powered down, the AD8375 consumes less than 5mA and offers excellent input to output isolation. The gain setting is preserved when powered down.

Fabricated on an ADI's high speed SiGe process, the AD8375 provides precise gain adjustment capabilities with good distortion performance. The AD8375 amplifier comes in a compact, thermally enhanced 4 x 4mm 24-lead LFCSP package and operates over the temperature range of  $-40^{\circ}\text{C}$  to  $+85^{\circ}\text{C}$ .

## SPECIFICATIONS

$V_s = 5 \text{ V}$ ,  $T = 25^\circ\text{C}$ ,  $Z_s = Z_L = 150\Omega$  at 100MHz, 2 V p-p differential output unless otherwise noted.

Stresses above those listed under Absolute Maximum Ratings may cause permanent damage to the device. This is a stress rating only; functional operation of the device at these or any other conditions above those listed in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

## ESD CAUTION

ESD (electrostatic discharge) sensitive device. Electrostatic charges as high as 4000 V readily accumulate on the human body and test equipment and can discharge without detection. Although this product features proprietary ESD protection circuitry, permanent damage may occur on devices subjected to high energy electrostatic discharges. Therefore, proper ESD precautions are recommended to avoid performance degradation or loss of functionality.

## PIN CONFIGURATION AND FUNCTIONAL DESCRIPTIONS

Table 3. Pin Function Descriptions

Pin No.	Mnemonic	Description
1	VCOM	Common Mode Pin. Typically bypassed to ground using external capacitor.
2	VIN+	Voltage Input Positive.
3	VIN-	Voltage Input Negative.
4	A4	The Most Significant Bit (MSB) for the 5-bit Gain Control Interface.
5	A3	MSB-1 for the Gain Control Interface.
6	A2	MSB-2 for the Gain Control Interface.
7	A1	LSB+1 for the Gain Control Interface.
8	A0	The Least Significant Bit (LSB) for the 5-bit Gain Control Interface.
9, 10, 12, 13, 23	VPOS	Positive Supply Pins. Should be bypassed to Ground using suitable bypass capacitor.
11, 14, 20, 21, 22, 24	COMM	Device Common (DC Ground).
15, 17	VOUT+	Positive Output Pins (Open Collector). Require DC bias of +5V nominal.
16, 18	VOUT-	Negative Output Pins (Open Collector). Require DC bias of +5V nominal.
19	PWUP	Chip Enable Pin.
