Description

The CPC1218Y is a miniature voltage-controlled 1-Form-A Solid State Relay in a 4-pin Single In-line Package (SIP) that employs optically coupled MOSFET technology to provide 2500V_{rms} of input to output isolation. The super efficient MOSFET switches and photovoltaic die use Clare's patented OptoMOS® architecture. The optically-coupled output is controlled by the input's highly efficient GaAlAs infrared LED and a built-in series resistor to provide input voltage-controlled operation.

The CPC1218Y features a pin-out that matches many popular reed relays and is thus a "drop-in" solid state replacement. Because the input is solid state there is no need for snubbers or "catch" diodes to suppress the inductive fly back transient voltage normally associated with EMR coils.
