

M62363FP

8-BIT 8CH D-A CONVERTER

DESCRIPTION

The M62363FP is an integrated circuit semiconductor of CMOS structure with 8 channels of built-in 8-bit multiplication type D-A converters.

The input data is a easy-to-use 3-wire serial method and it is able to cascading serial use with Do terminal.

The device is suited for use in automatic adjustment combination of microcomputer.

FEATURES

- Digital data transfer method
3-wire serial data transfer method
- D-A converter system
Employment of the additional higher-order segment R-2R method doubled precision compared to the conventional R-2R method.
- Short setting time
- 4 Quadrant multiplication

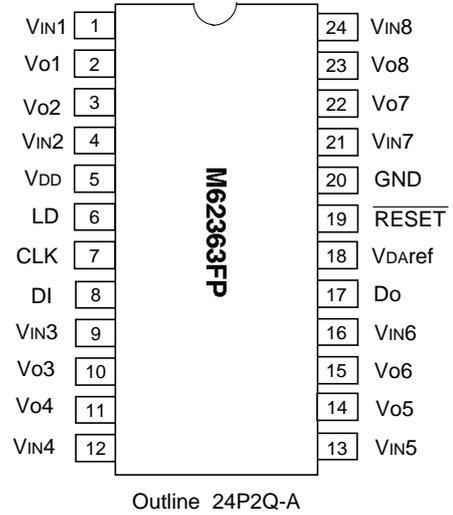

APPLICATION

Conversion from digital control data to analog control data for home-use and industrial equipment.

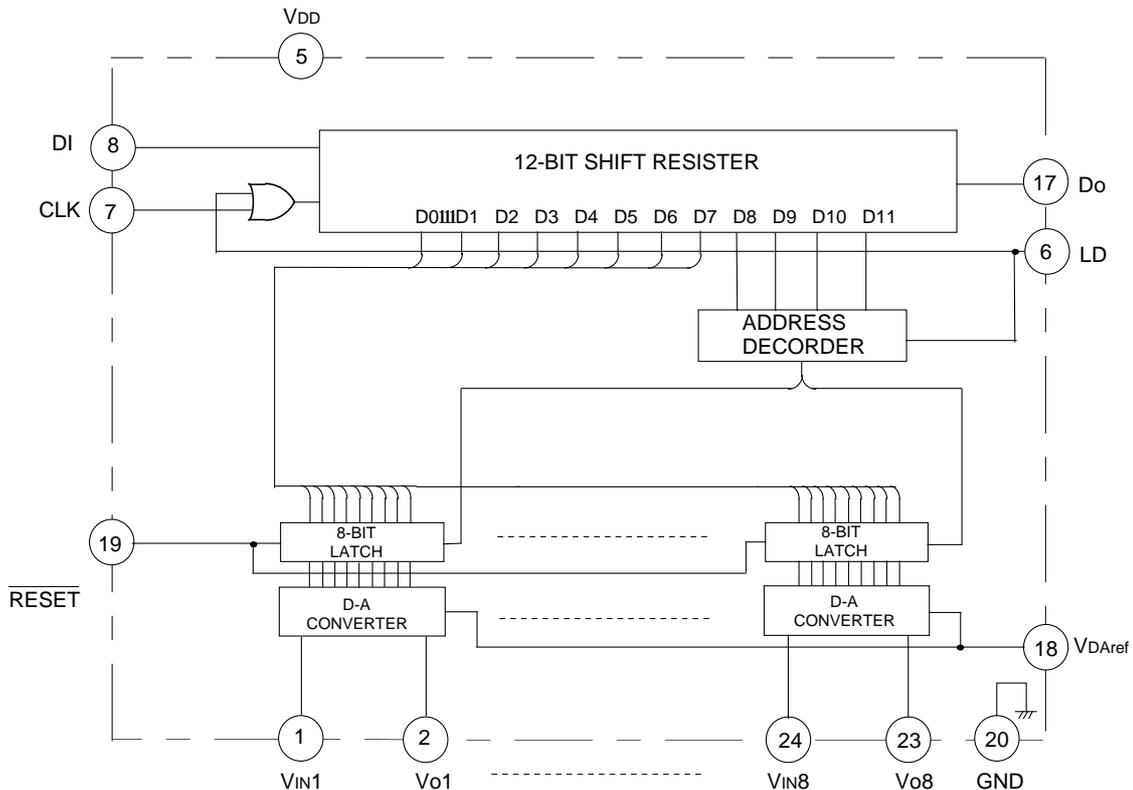

Automatic adjustment by combination with EEPROM and microcomputer.(replacement of conventional half-fixed resistor.)

Signal gain control of DISPLAY-MONITOR or CTV.

OPERATING DESCRIPTION

*Ch1-Ch7 becomes multiplication type D-A converter action of 0~5V range by each output adds OP1.

*Ch8 become 4 quadrant multiplication of 0~12V range at 6V center by add OP1 and OP2 to this channel.

APPLICATION EXAMPLE OF CASCADE CONNECTION

*In this example, M62363X2 are connected in cascade.
 *A 24-bit input data can be used to automatically control up to 16 channels.
