SDAS032A – DECEMBER 1983 – REVISED MARCH 1985

- **Package Options Include Plastic Small Outline Packages, Both Plastic and Ceramic Chip Carriers, and Standard Plastic and Ceramic 300-mil DIPs**
- **Buffered 3-State Outputs Drive Bus Lines Directly**
- **Cascadable to n-Bits**
- **Eight Selectable Transceiver/Port Functions:**
  - **– B to A**
  - **– Register to A and/or B**
  - **– Off-Line Shifts (A and B Ports in High-Impedance State)**
  - **– Shifted to A and/or B**
- **Particularly Suitable for Use in Diagnostics Analysis Circuitry**
- **Serial Register Provides:**
  - **– Parallel Storage of Either A or B input Data**
  - **– Serial Transmission of Data from Either A or B Port**
  - **– Readback Mode B to A**
- **Dependable Texas Instruments Quality and Reliability**

NC – No internal connection

description

The ’AS856 features two 8-bit I/O ports (A1-A8 and B1-B8), an 8-bit parallel-load, serial-in, parallel-out shift register, and control logic. With these features, this device is capable of performing eight selectable transceiver or port functions, depending on the state of the three control lines $\overline{\text{OEA}}$, $\overline{\text{OEB}}$, and MODE. These functions include: transferring data from port A to port B or vice versa (i.e., the transceiver function), serial shifting data to either or both ports, and performing off-line shifts (with A and B ports active as transceivers in a high-impedance state). Synchronous parallel loading of the internal register can be accomplished from either port on the positive transition of the clock while serially shifting data in via the SERIN input. The ’AS856 is ideally suited for applications needing signature-analysis circuitry to enhance system verification and/or fault analysis. All serial data is shifted right. All outputs are buffer-type outputs designed specifically to drive bus lines directly and all are 3-state except for Q8, which is a totem-pole output.

The SN54AS856 is characterized for operation over the full military temperature range of –55°C to 125°C. The SN74AS856 is characterized for operation from 0°C to 70°C.

n = level of Q_n(n = 1, 2 . . 8) established on most recent ↑ transition of CLK. Q1 through Q8 are the shift register outputs; only Q8 is available externally. The double inversions that take place as the data travels from port to port are ignored in this table.

† The positive transition of the MODE control will cause low-level data at the A output bus or stored in Q to be invalid for 12 ns.
NOTE 1: Load circuit and voltage waveforms are shown in Section 1.

IMPORTANT NOTICE

Texas Instruments (TI) reserves the right to make changes to its products or to discontinue any semiconductor product or service without notice, and advises its customers to obtain the latest version of relevant information to verify, before placing orders, that the information being relied on is current and complete.

TI warrants performance of its semiconductor products and related software to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are utilized to the extent TI deems necessary to support this warranty. Specific testing of all parameters of each device is not necessarily performed, except those mandated by government requirements.

Certain applications using semiconductor products may involve potential risks of death, personal injury, or severe property or environmental damage ("Critical Applications").

TI SEMICONDUCTOR PRODUCTS ARE NOT DESIGNED, INTENDED, AUTHORIZED, OR WARRANTED TO BE SUITABLE FOR USE IN LIFE-SUPPORT APPLICATIONS, DEVICES OR SYSTEMS OR OTHER CRITICAL APPLICATIONS.

Inclusion of TI products in such applications is understood to be fully at the risk of the customer. Use of TI products in such applications requires the written approval of an appropriate TI officer. Questions concerning potential risk applications should be directed to TI through a local SC sales office.

In order to minimize risks associated with the customer's applications, adequate design and operating safeguards should be provided by the customer to minimize inherent or procedural hazards.

TI assumes no liability for applications assistance, customer product design, software performance, or infringement of patents or services described herein. Nor does TI warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right of TI covering or relating to any combination, machine, or process in which such semiconductor products or services might be or are used.
