**NOTES:**

1. CURRENT TRANSFER RATIO is defined as the ratio of output collector current,  $I_O$ , to the forward LED input current,  $I_F$ , times 100%.
2.  $I_F = 2\mu\text{A}$  for channel under test. For all other channels,  $I_F = 10\text{mA}$ .
3. Device considered a two-terminal device. Pins 1-6 and 16 are shorted together and pins 7-14 are shorted together.
4. Measured between each input pair shorted together.
5.  $CM_H$  is the maximum tolerable common mode transient to assure that the output will remain in a high logic state (i.e.  $V_O > @.0\text{V}$ ).
6.  $CM_L$  is the maximum tolerable common mode transient to assure that the output will remain in a low logic state (i.e.  $V_O < 0.8\text{V}$ ).
7. In applications where  $dv/dt$  may exceed 50,000 V/ $\mu\text{s}$  (such as static discharge) a series resistor,  $R_{CC}$ , should be included to protect the detector ICs from destructively high surge currents. The recommended value is  $R_{CC} = \frac{1\text{V}}{0.6I_F} = \text{k}\Omega$

**RECOMMENDED OPERATING CONDITIONS:**

PARAMETER	SYMBOL	MIN	MAX	UNITS
Input Current, Low Level	$I_{FL}$	0	2	$\mu\text{A}$
Input Current, High Level	$I_{FH}$	0.5	5	mA
Supply Voltage	$V_{CC}$	2.0	18	V
