8,388,608-word $\times$ 40-bit High Density Dynamic RAM Module
4,194,304-word $\times$ 40-bit High Density Dynamic RAM Module

HITACHI

ADE-203-730A (Z)

Rev.1.0

Feb. 20, 1997

Description

The HB56A840BR is a 8M $\times$ 40 dynamic RAM module, mounted 20 pieces of 16-Mbit DRAM (HM5116400) sealed in SOJ package. The HB56A440BR is a 4M $\times$ 40 dynamic RAM module, mounted 10 pieces of 16-Mbit DRAM (HM5116400) sealed in SOJ package. An outline of the HB56A840BR, HB56A440BR is 72-pin single in-line package. Therefore, the HB56A840BR, HB56A440BR make high density mounting possible without surface mount technology. The HB56A840BR, HB56A440BR provide common data inputs and outputs. Decoupling capacitors are mounted on the module board.

Features

- 72-pin single in-line package
 - Outline: 107.95 mm (Length) $\times$ 25.40 mm (Height) $\times$ 9.14/5.28 mm (Thickness)
 - Lead pitch: 1.27 mm
- Single 5 V ($\pm 5\%$) supply
- High speed
 - Access time: $t_{\text{RAC}} = 50/60/70\text{ns}$ (max)
- Low power dissipation
 - Active mode: 4.99/4.47/3.94 W (max) (HB56A840BR Series)
4.73/4.20/3.68 W (max) (HB56A440BR Series)
 - Standby mode (TTL): 210 mW (max) (HB56A840BR Series)
(TTL): 105 mW (max) (HB56A440BR Series)
(CMOS): 105 mW (max) (HB56A840BR Series)
(CMOS): 52.5 mW (max) (HB56A440BR Series)
- Fast page mode capability
- Refresh period
 - 4096 refresh cycles: 64 ms

HB56A840BR Series, HB56A440BR Series

- 3 variations of refresh
 - $\overline{\text{RAS}}$ -only refresh
 - $\overline{\text{CAS}}$ -before- $\overline{\text{RAS}}$ refresh
 - Hidden refresh
- TTL compatible

Access time from $\overline{CAS}$ precharge	t_{CPA}	—	30	—	35	—	40	ns	9, 17
$\overline{RAS}$ hold time from $\overline{CAS}$ precharge	t_{CPRH}	30	—	35	—	40	—	ns	

HB56A840BR Series, HB56A440BR Series

Fast Page Mode Read-Modify-Write Cycle

Parameter	Symbol	50 ns		60 ns		70 ns		Unit	Notes
		Min	Max	Min	Max	Min	Max		
Fast page mode read-modify-write cycle time	t _{PRWC}	76	—	85	—	96	—	ns	
WE delay time from CAS precharge	t _{CPW}	53	—	60	—	68	—	ns	14

- Notes:
1. AC measurements assume $t_T = 5 \text{ ns}$.
 2. An initial pause of $200 \mu\text{s}$ is required after power up followed by a minimum of eight initialization cycles (any combination of cycles containing RAS-only refresh cycle or CAS-before-RAS refresh). If the internal refresh counter is used, a minimum of eight $\overline{\text{CAS}}$ -before- $\overline{\text{RAS}}$ refresh cycles are required.
 3. Operation with the $t_{\text{RCD}}(\text{max})$ limit insures that $t_{\text{RAC}}(\text{max})$ can be met, $t_{\text{RCD}}(\text{max})$ is specified as a reference point only; if t_{RCD} is greater than the specified $t_{\text{RCD}}(\text{max})$ limit, then access time is controlled exclusively by t_{CAC} .
 4. Operation with the $t_{\text{RAD}}(\text{max})$ limit insures that $t_{\text{RAC}}(\text{max})$ can be met, $t_{\text{RAD}}(\text{max})$ is specified as a reference point only; if t_{RAD} is greater than the specified $t_{\text{RAD}}(\text{max})$ limit, then access time is controlled exclusively by t_{AA} .
 5. Either t_{OED} or t_{CDD} must be satisfied.
 6. Either t_{DZO} or t_{DZC} must be satisfied.
 7. $V_{\text{IH}}(\text{min})$ and $V_{\text{IL}}(\text{max})$ are reference levels for measuring timing of input signals. Also, transition times are measured between $V_{\text{IH}}(\text{min})$ and $V_{\text{IL}}(\text{max})$.
 8. Assumes that $t_{\text{RCD}} \leq t_{\text{RCD}}(\text{max})$ and $t_{\text{RAD}} \leq t_{\text{RAD}}(\text{max})$. If t_{RCD} or t_{RAD} is greater than the maximum recommended value shown in this table, t_{RAC} exceeds the value shown.
 9. Measured with a load circuit equivalent to 2TTL loads and 100 pF .
 10. Assumes that $t_{\text{RCD}} \geq t_{\text{RCD}}(\text{max})$ and $t_{\text{RCD}} + t_{\text{CAC}}(\text{max}) \geq t_{\text{RAD}} + t_{\text{AA}}(\text{max})$.
 11. Assumes that $t_{\text{RAD}} \geq t_{\text{RAD}}(\text{max})$ and $t_{\text{RCD}} + t_{\text{CAC}}(\text{max}) \leq t_{\text{RAD}} + t_{\text{AA}}(\text{max})$.
 12. Either t_{RCH} or t_{RRH} must be satisfied for a read cycles.
 13. $t_{\text{OFF}}(\text{max})$ and $t_{\text{OEZ}}(\text{max})$ is define the time at which the outputs achieve the open circuit condition and are not referred to output voltage levels.
 14. t_{WCS} , t_{RWD} , t_{CWD} , t_{CPW} and t_{AWD} are not restrictive operating parameters. They are included in the data sheet as electrical characteristics only; if $t_{\text{WCS}} \geq t_{\text{WCS}}(\text{min})$, the cycle is an early write cycle and the data out pin will remain open circuit (high impedance) throughout the entire cycle; if $t_{\text{RWD}} \geq t_{\text{RWD}}(\text{min})$, $t_{\text{CWD}} \geq t_{\text{CWD}}(\text{min})$, and $t_{\text{AWD}} \geq t_{\text{AWD}}(\text{min})$ or $t_{\text{CWD}} \geq t_{\text{CWD}}(\text{min})$, $t_{\text{AWD}} \geq t_{\text{AWD}}(\text{min})$ and $t_{\text{CPW}} \geq t_{\text{CPW}}(\text{min})$, the cycle is a read-modify-write and the data output will contain data read from the selected cell; if neither of the above sets of conditions is satisfied, the condition of the data out (at access time) is indeterminate.
 15. These parameters are referred to $\overline{\text{CAS}}$ leading edge in early write cycle and to $\overline{\text{WE}}$ leading edge in delayed write or read-modify-write cycles.
 16. t_{RASP} defines $\overline{\text{RAS}}$ pulse width in fast page mode cycles.
 17. Access time is determined by the longest among t_{AA} , t_{CAC} or t_{CPA} .
 18. In delayed write or read-modify-write cycle, $\overline{\text{OE}}$ must disable output buffer prior to applying data to the device. After $\overline{\text{RAS}}$ is reset, if $t_{\text{OEH}} \geq t_{\text{CWL}}$, the DQ pin will remain open circuit (high impedance); if $t_{\text{OEH}} \leq t_{\text{CWL}}$, invalid data will be out at each DQ.
 19. All the V_{CC} and V_{SS} pins shall be supplied with the same voltages.
 20. When output buffers are enabled once, sustain the low impedance state until valid data is obtained. When output buffer is turned on and off within a very short time, generally causes large $V_{\text{CC}} / V_{\text{SS}}$ line noise, which causes to degrade $V_{\text{IH}}(\text{min}) / V_{\text{IL}}(\text{max})$ level.
 21. XXX: H or L (H: $V_{\text{IH}}(\text{min}) \leq V_{\text{IN}} \leq V_{\text{IH}}(\text{max})$, L: $V_{\text{IL}}(\text{min}) \leq V_{\text{IN}} \leq V_{\text{IL}}(\text{max})$)
 /////////////// Invalid Dout
 When the address, clock and input pins are not described on timing waveforms, their pins must be applied V_{IH} or V_{IL} .

Physical Outline

HB56A840BR Series

Unit: $\frac{\text{mm}}{\text{inch}}$

HB56A840BR Series, HB56A440BR Series

HB56A440BR Series

When using this document, keep the following in mind:

1. This document may, wholly or partially, be subject to change without notice.
2. All rights are reserved: No one is permitted to reproduce or duplicate, in any form, the whole or part of this document without Hitachi's permission.
3. Hitachi will not be held responsible for any damage to the user that may result from accidents or any other reasons during operation of the user's unit according to this document.
4. Circuitry and other examples described herein are meant merely to indicate the characteristics and performance of Hitachi's semiconductor products. Hitachi assumes no responsibility for any intellectual property claims or other problems that may result from applications based on the examples described herein.
5. No license is granted by implication or otherwise under any patents or other rights of any third party or Hitachi, Ltd.
6. **MEDICAL APPLICATIONS:** Hitachi's products are not authorized for use in **MEDICAL APPLICATIONS** without the written consent of the appropriate officer of Hitachi's sales company. Such use includes, but is not limited to, use in life support systems. Buyers of Hitachi's products are requested to notify the relevant Hitachi sales offices when planning to use the products in **MEDICAL APPLICATIONS**.
