■ DESCRIPTION

The MB90540/545 series with FULL-CAN*¹ and FLASH ROM is specially designed for automotive and industrial applications. Its main features are two on board CAN Interfaces (one for MB90V545 series) , which conform to V2.0 Part A and Part B, supporting very flexible message buffer scheme and so offering more functions than a normal full CAN approach. The instruction set by F²MC-16LX CPU core inherits an AT architecture of the F²MC*² family with additional instruction sets for high-level languages, extended addressing mode, enhanced multiplication/division instructions, and enhanced bit manipulation instructions. The micro controller has a 32-bit accumulator for processing long word data. The MB90540/545 series has peripheral resources of 8/10-bit A/D converters, UART (SCI) , extended I/O serial interfaces, 8/16-bit timer, I/O timer (input capture (ICU) , output compare (OCU)) .

*1 : Controller Area Network (CAN) -License of Robert Bosch GmbH.

*2 : F²MC stands for FUJITSU Flexible Microcontroller.

■ FEATURES

- Clock
Embedded PLL clock multiplication circuit
Operating clock (PLL clock) can be selected from : divided-by-2 of oscillation or one to four times the oscillation
Minimum instruction execution time : 62.5 ns (operation at oscillation of 4 MHz, four times the oscillation clock)
Subsystem Clock : 32 kHz

■ PACKAGES

*(Continued)*

MB90540/540G/545/545G Series

- Instruction set to optimize controller applications
 - Rich data types (bit, byte, word, long word)
 - Rich addressing mode (23 types)
 - Enhanced signed multiplication/division instruction and RETI instruction functions
 - Enhanced precision calculation realized by the 32-bit accumulator
- Instruction set designed for high level language (C language) and multi-task operations
 - Adoption of system stack pointer
 - Enhanced pointer indirect instructions
 - Barrel shift instructions
- Program patch function (for two address pointers)
- Enhanced execution speed : 4-byte Instruction queue
- Enhanced interrupt function : 8 levels, 34 factors
- Automatic data transmission function independent of CPU operation
 - Extended intelligent I/O service function (EI²OS)
- Embedded ROM size and types
 - Mask ROM : 256 Kbytes / 64 Kbytes / 128 Kbytes
 - Flash ROM : 128 Kbytes/256 Kbytes
 - Embedded RAM size : 2 Kbytes/4 Kbytes/6 Kbytes/8 Kbytes (evaluation chip)
- Flash ROM
 - Supports automatic programming, Embedded Algorithm TM*
 - Write/Erase/Erase-Suspend/Resume commands
 - A flag indicating completion of the algorithm
 - Hard-wired reset vector available in order to point to a fixed boot sector in Flash Memory
 - Erase can be performed on each block
 - Block protection with external programming voltage
- Low-power consumption (stand-by) mode
 - Sleep mode (mode in which CPU operating clock is stopped)
 - Stop mode (mode in which oscillation is stopped)
 - CPU intermittent operation mode
 - Clock mode
 - Hardware stand-by mode
- Process
 - 0.5 μ m CMOS technology
- I/O port
 - General-purpose I/O ports : 81 ports
- Timer
 - Watchdog timer : 1 channel
 - 8/16-bit PPG timer : 8/16-bit $\times$ 4 channels
 - 16-bit re-load timer : 2 channels
- 16-bit I/O timer
 - 16-bit free-run timer : 1 channel
 - Input capture : 8 channels
 - Output compare : 4 channels
- Extended I/O serial interface : 1 channel
- UART 0
 - With full-duplex double buffer (8-bit length)
 - Clock asynchronous or clock synchronized (with start/stop bit) transmission can be selectively used.

(Continued)

MB90540/540G/545/545G Series

(Continued)

- UART 1
With full-duplex double buffer (8-bit length)
Clock asynchronized or clock synchronized serial (extended I/O serial) can be used.
- External interrupt circuit (8 channels)
A module for starting an extended intelligent I/O service (EI²OS) and generating an external interrupt which is triggered by an external input.
- Delayed interrupt generation module
Generates an interrupt request for switching tasks.
- 8/10-bit A/D converter (8 channels)
8/10-bit resolution can be selectively used.
Starting by an external trigger input.
Conversion time : 26.3 μ s
- FULL-CAN interfaces
MB90540 series : 2 channel
MB90545 series : 1 channel
Conforming to Version 2.0 Part A and Part B
Flexible message buffering (mailbox and FIFO buffering can be mixed)
- External bus interface : Maximum address space 16 Mbytes
- Package: QFP-100, LQFP-100

* : Embedded Algorithm is a trade mark of Advanced Micro Devices Inc.

MB90540/540G/545/545G Series

Features	MB90F543/F549 MB90F543G (S) /F548G (S) MB90F549G (S) /F546G (S) MB90F548GL(S)	MB90543G (S) *1 MB90547G (S) *1 MB90548G (S) MB90549G (S)	MB90V540 MB90V540G
16-bit Reload Timer (2 channels)	Operation clock frequency : $f_{sys}/2^1$, $f_{sys}/2^3$, $f_{sys}/2^5$ (f_{sys} = System clock frequency) Supports External Event Count function Signals an interrupt when overflow		
16-bit I/O Timer	Supports Timer Clear when a match with Output Compare (Channel 0) Operation clock freq. : $f_{sys}/2^2$, $f_{sys}/2^4$, $f_{sys}/2^6$, $f_{sys}/2^8$ (f_{sys} = System clock freq.)		
16-bit Output Compare (4 channels)	Signals an interrupt when a match with 16-bit I/O Timer Four 16-bit compare registers A pair of compare registers can be used to generate an output signal		
16-bit Input Capture (8 channels)	Rising edge, falling edge or rising & falling edge sensitive Four 16-bit Capture registers Signals an interrupt upon external event		
8/16-bit Programmable Pulse Generator (4 channels)	Supports 8-bit and 16-bit operation modes Eight 8-bit reload counters Eight 8-bit reload registers for L pulse width Eight 8-bit reload registers for H pulse width A pair of 8-bit reload counters can be configured as one 16-bit reload counter or as 8-bit prescaler plus 8-bit reload counter 4 output pins Operation clock freq. : f_{sys} , $f_{sys}/2^1$, $f_{sys}/2^2$, $f_{sys}/2^3$, $f_{sys}/2^4$ or $128 \mu s @ f_{osc} = 4 \text{ MHz}$ (f_{sys} = System clock frequency, f_{osc} = Oscillation clock frequency)		
CAN Interface MB90540 series : 2 channels MB90545 series : 1 channel	Conforms to CAN Specification Version 2.0 Part A and B Automatic re-transmission in case of error Automatic transmission responding to Remote Frame Prioritized 16 message buffers for data and ID's supports multiple messages Flexible configuration of acceptance filtering : Full bit compare/Full bit mask/Two partial bit masks Supports up to 1 Mbps		
32 kHz Sub-clock	Sub-clock for low power operation		
External Interrupt (8 channels)	Can be programmed edge sensitive or level sensitive		
External bus interface	External access using the selectable 8-bit or 16-bit bus is enabled (external bus mode.)		
I/O Ports	Virtually all external pins can be used as general purpose I/O All push-pull outputs and schmitt trigger inputs Bit-wise programmable as input/output or peripheral signal Sub-clock for 32 kHz Sub clock low power operation		
Flash Memory	Supports automatic programming, Embedded Algorithm TM ^{*4} Write/Erase/Erase-Suspend/Erase-Resume commands A flag indicating completion of the algorithm Number of erase cycles : 10,000 times Data retention time : 10 years Boot block configuration Erase can be performed on each block Block protection by externally programmed voltage		

*1 : Under development

*2 : If the one clock system is used, equip X0A and X1A with clocks from the tool side.

MB90540/540G/545/545G Series

*3 : It is setting of DIP switch S2 when Emulation pod (MB2145-507) is used. Please refer to the MB2145-507 hardware manual (2.7 Emulator-specific Power Pin) about details.

*4 : Embedded Algorithm is a trade mark of Advanced Micro Devices Inc.

■ PIN DESCRIPTION

Pin No.		Pin name	Circuit type	Function
LQFP*2	QFP*1			
80 81	82 83	X0 X1	A (Oscillation)	High speed crystal oscillator input pins
78	80	X0A	A (Oscillation)	Low speed crystal oscillator input pins. For the one clock system parts, perform external pull-down processing.
77	79	X1A		Low speed crystal oscillator input pins. For the one clock system parts, leave it open.
75	77	$\overline{\text{RST}}$	B	External reset request input pin
50	52	$\overline{\text{HST}}$	C	Hardware standby input pin
83 to 90	85 to 92	P00 to P07	I	General I/O port with programmable pullup. This function is enabled in the single-chip mode.
		AD00 to AD07		I/O pins for 8 lower bits of the external address/data bus. This function is enabled when the external bus is enabled.
91 to 98	93 to 100	P10 to P17	I	General I/O port with programmable pullup. This function is enabled in the single-chip mode.
		AD08 to AD15		I/O pins for 8 higher bits of the external address/data bus. This function is enabled when the external bus is enabled.
99 to 6	1 to 8	P20 to P27	I	General I/O port with programmable pullup. In external bus mode, this function is valid when the corresponding bits in the external address output control resister (HACR) are set to "1".
		A16 to A23		8-bit I/O pins for A16 to A23 at the external address/data bus. In external bus mode, this function is valid when the corresponding bits in the external address output control resister (HACR) are set to "0".
7	9	P30	I	General I/O port with programmable pullup. This function is enabled in the single-chip mode.
		ALE		Address latch enable output pin. This function is enabled when the external bus is enabled.
8	10	P31	I	General I/O port with programmable pullup. This function is enabled in the single-chip mode.
		$\overline{\text{RD}}$		Read strobe output pin for the data bus. This function is enabled when the external bus is enabled.
10	12	P32	I	General I/O port with programmable pullup. This function is enabled in the single-chip mode or when the $\overline{\text{WR}}/\overline{\text{WRL}}$ pin output is disabled.
		$\overline{\text{WRL}}$		Write strobe output pin for the data bus. This function is enabled when both the external bus and the $\overline{\text{WR}}/\overline{\text{WRL}}$ pin output are enabled. $\overline{\text{WRL}}$ is write-strobe output pin for the lower 8 bits of the data bus in 16-bit access. $\overline{\text{WR}}$ is write-strobe output pin for the 8 bits of the data bus in 8-bit access.
		$\overline{\text{WR}}$		

(Continued)

MB90540/540G/545/545G Series

Pin No.		Pin name	Circuit type	Function
LQFP*2	QFP*1			
11	13	P33	I	General I/O port with programmable pullup. This function is enabled in the single-chip mode, external bus 8-bit mode or when $\overline{\text{WRH}}$ pin output is disabled.
		$\overline{\text{WRH}}$		Write strobe output pin for the 8 higher bits of the data bus. This function is enabled when the external bus is enabled, when the external bus 16-bit mode is selected, and when the $\overline{\text{WRH}}$ output pin is enabled.
12	14	P34	I	General I/O port with programmable pullup. This function is enabled in the single-chip mode or when the hold function is disabled.
		HRQ		Hold request input pin. This function is enabled when both the external bus and the hold functions are enabled.
13	15	P35	I	General I/O port with programmable pullup. This function is enabled in the single-chip mode or when the hold function is disabled.
		$\overline{\text{HAK}}$		Hold acknowledge output pin. This function is enabled when both the external bus and the hold functions are enabled.
14	16	P36	I	General I/O port with programmable pullup. This function is enabled in the single-chip mode or when the external ready function is disabled.
		RDY		Ready input pin. This function is enabled when both the external bus and the external ready functions are enabled.
15	17	P37	H	General I/O port with programmable pullup. This function is enabled in the single-chip mode or when the CLK output is disabled.
		CLK		CLK output pin. This function is enabled when both the external bus and CLK outputs are enabled.
16	18	P40	G	General I/O port. This function is enabled when UART0 disables the serial data output.
		SOT0		Serial data output pin for UART0. This function is enabled when UART0 enables the serial data output.
17	19	P41	G	General I/O port. This function is enabled when UART0 disables serial clock output.
		SCK0		Serial clock I/O pin for UART0. This function is enabled when UART0 enables the serial clock output.
18	20	P42	G	General I/O port. This function is always enabled.
		SIN0		Serial data input pin for UART0. Set the corresponding Port Direction Register to input if this function is used.
19	21	P43	G	General I/O port. This function is always enabled.
		SIN1		Serial data input pin for UART1. Set the corresponding Port Direction Register to input if this function is used.

MB90540/540G/545/545G Series

Pin No.		Pin name	Circuit type	Function
LQFP*2	QFP*1			
20	22	P44	G	General I/O port. This function is enabled when UART1 disables the clock output.
		SCK1		Serial clock pulse I/O pin for UART1. This function is enabled when UART1 enables the serial clock output.
22	24	P45	G	General I/O port. This function is enabled when UART1 disables the serial data output.
		SOT1		Serial data output pin for UART1. This function is enabled when UART1 enables the serial data output.
23	25	P46	G	General I/O port. This function is enabled when the Extended I/O serial interface disables the serial data output.
		SOT2		Serial data output pin for the Extended I/O serial interface. This function is enabled when the Extended I/O serial interface enables the serial data output.
24	26	P47	G	General I/O port. This function is enabled when the Extended I/O serial interface disables the clock output.
		SCK2		Serial clock pulse I/O pin for the Extended I/O serial interface . This function is enabled when the Extended I/O serial interface enables the Serial clock output.
26	28	P50	D	General I/O port. This function is always enabled.
		SIN2		Serial data input pin for the Extended I/O serial interface . Set the corresponding Port Direction Register to input if this function is used.
27 to 30	29 to 32	P51 to P54	D	General I/O port. This function is always enabled.
		INT4 to INT7		External interrupt request input pins for INT4 to INT7. Set the corresponding Port Direction Register to input if this function is used.
31	33	P55	D	General I/O port. This function is always enabled.
		ADTG		Trigger input pin for the A/D converter. Set the corresponding Port Direction Register to input if this function is used.
36 to 39	38 to 41	P60 to P63	E	General I/O port. This function is enabled when the analog input enable register specifies a port.
		AN0 to AN3		Analog input pins for the 8/10-bit A/D converter. This function is enabled when the analog input enable register specifies A/D.
41 to 44	43 to 46	P64 to P67	E	General I/O port. The function is enabled when the analog input enable register specifies a port.
		AN4 to AN7		Analog input pins for the 8/10-bit A/D converter. This function is enabled when the analog input enable register specifies A/D.
45	47	P56	D	General I/O port. This function is always enabled.
		TIN0		Event input pin for the 16-bit reload timers 0. Set the corresponding Port Direction Register to input if this function is used.

(Continued)

MB90540/540G/545/545G Series

Pin No.		Pin name	Circuit type	Function
LQFP*2	QFP*1			
46	48	P57	D	General I/O port. This function is enabled when the 16-bit reload timers 0 disables the output.
		TOT0		Output pin for the 16-bit reload timers 0. This function is enabled when the 16-bit reload timers 0 enables the output.
51 to 56	53 to 58	P70 to P75	D	General I/O ports. This function is always enabled.
		IN0 to IN5		Trigger input pins for input captures ICU0 to ICU5. Set the corresponding Port Direction Register to input if this function is used.
57 , 58	59 , 60	P76 , P77	D	General I/O ports. This function is enabled when the OCU disables the waveform output.
		OUT2 , OUT3		Event output pins for output compares OCU2 and OCU3. This function is enabled when the OCU enables the waveform output.
		IN6 , IN7		Trigger input pins for input captures ICU6 and ICU7. Set the corresponding Port Direction Register to input and disable the OCU waveform output if this function is used.
59 , 62	61 to 64	P80 to P83	D	General I/O ports. This function is enabled when 8/16-bit PPG disables the waveform output.
		PPG0 to PPG3		Output pins for 8/16-bit PPGs. This function is enabled when 8/16-bit PPG enables the waveform output.
63 , 64	65 , 66	P84 , P85	D	General I/O ports. This function is enabled when the OCU disables the waveform output.
		OUT0 , OUT1		Waveform output pins for output compares OCU0 and OCU1. This function is enabled when the OCU enables the waveform output.
65	67	P86	D	General I/O port. This function is always enabled.
		TIN1		Input pin for the 16-bit reload timers 1. Set the corresponding Port Direction Register to input if this function is used.
66	68	P87	D	General I/O port. This function is enabled when the 16-bit reload timers 0 disables the output.
		TOT1		Output pin for the 16-bit reload timers 1. This function is enabled when the 16-bit reload timers 1 enables the output.
67 to 70	69 to 72	P90 to P93	D	General I/O port. This function is always enabled.
		INT0 to INT3		External interrupt request input pins for INT0 to INT3. Set the corresponding Port Direction Register to input if this function is used.
71	73	P94	D	General I/O port. This function is enabled when CAN0 disables the output.
		TX0		TX output pin for CAN0. This function is enabled when CAN0 enables the output.

Pin No.		Pin name	Circuit type	Function
LQFP*2	QFP*1			
72	74	P95	D	General I/O port. This function is always enabled.
		RX0		RX input pin for CAN0 Interface. When the CAN function is used, output from the other functions must be stopped.
73	75	P96	D	General I/O port. This function is enabled when CAN1 disables the output.
		TX1		TX output pin for CAN1. This function is enabled when CAN1 enables the output (only MB90540 series) .
74	76	P97	D	General I/O port. This function is always enabled.
		RX1		RX input pin for CAN1 Interface. When the CAN function is used, output from the other functions must be stopped (only MB90540 series) .
76	78	PA0	D	General I/O port. This function is always enabled.
32	34	AV _{CC}	Power supply	Power supply pin for the A/D Converter. This power supply must be turned on or off while a voltage higher than or equal to AV _{CC} is applied to V _{CC} .
35	37	AV _{SS}	Power supply	Power supply pin for the A/D Converter.
33	35	AVRH	Power supply	External reference voltage input pin for the A/D Converter. This power supply must be turned on or off while a voltage higher than or equal to AVR _H is applied to AV _{CC} .
34	36	AVRL	Power supply	External reference voltage input pin for the A/D Converter.
47 48	49 50	MD0 MD1	C	Input pins for specifying the operating mode. The pins must be directly connected to V _{CC} or V _{SS} .
49	51	MD2	F	Input pin for specifying the operating mode. The pin must be directly connected to V _{CC} or V _{SS} .
25	27	C	—	Power supply stabilization capacitor pin. It should be connected externally to an 0.1 μF ceramic capacitor.
21, 82	23, 84	V _{CC}	Power supply	Input pin for power supply (5.0 V) .
9, 40, 79	11, 42, 81	V _{SS}	Power supply	Input pin for power supply (0.0 V) .

■ I/O CIRCUIT TYPE

Circuit type	Diagram	Remarks
A	Diagram A shows a logic circuit with inputs X1, X1A and X0, X0A. The circuit includes a P-channel MOSFET and an N-channel MOSFET. The gates of both MOSFETs are connected to a standby control signal. The drains of both MOSFETs are connected to a common node that goes through an inverter to the output. The gates of the MOSFETs are also connected to an AND gate, which is connected to the output through a feedback resistor.	• High-speed oscillation feedback resistor : 1 MΩ approx. • Low-speed oscillation feedback resistor : 10 MΩ approx.
B	Diagram B shows a logic circuit with a pull-up resistor R connected to Vcc. The input is connected to the pull-up resistor and a resistor R, which is connected to the HYS input of an inverter.	• Hysteresis input • Pull-up resistor : 50 kΩ approx.
C	Diagram C shows a logic circuit with a resistor R connected to the HYS input of an inverter.	• Hysteresis input
D	Diagram D shows a logic circuit with a P-channel MOSFET (P-ch) and an N-channel MOSFET (N-ch). The gates of both MOSFETs are connected to Vcc. The drains of both MOSFETs are connected to a common node that goes through an inverter to the output. The gates of the MOSFETs are also connected to a resistor R, which is connected to the HYS input of an inverter.	• CMOS level output • CMOS Hysteresis input

I		• CMOS level output • CMOS Hysteresis input • TTL level input (FLASH devices in FLASH writer mode only) • Programmable pullup resistor : 50 kΩ approx.

■ HANDLING DEVICES

(1) Preventing latch-up

CMOS IC chips may suffer latch-up under the following conditions :

- A voltage higher than V_{CC} or lower than V_{SS} is applied to an input or output pin.
- A voltage higher than the rated voltage is applied between V_{CC} and V_{SS} .
- The AV_{CC} power supply is applied before the V_{CC} voltage.

Latch-up may increase the power supply current drastically, causing thermal damage to the device.

For the same reason, care must also be taken in not allowing the analog power-supply voltage (AV_{CC} , $AVRH$) to exceed the digital power-supply voltage.

(2) Handling unused pins

Leaving unused input pins open may result in misbehavior or latch up and possible permanent damage of the device. Therefore they must be pulled up or pulled down through resistors. In this case those resistors should be more than 2 k Ω .

Unused bi-directional pins should be set to the output state and can be left open, or the input state with the above described connection.

(3) Using external clock

To use external clock, drive X0 pin only and leave X1 pin unconnected.

Below is a diagram of how to use external clock.

(4) Use of the sub-clock

Use one clock system parts when the sub-clock is not used. In that case, pull-down the pin X0A and leave the pin X1A open. When using two clock system parts, a 32 kHz oscillator has to be connected to the X0A and X1A pins.

(5) Power supply pins (V_{CC}/V_{SS})

In products with multiple V_{CC} or V_{SS} pins, the pins of a same potential are internally connected in the device to avoid abnormal operations including latch-up. However you must connect the pins to an external power and a ground line to lower the electro-magnetic emission level to prevent abnormal operation of strobe signals caused by the rise in the ground level, and to conform to the total current rating.

Make sure to connect V_{CC} and V_{SS} pins via the lowest impedance to power lines.

It is recommended to provide a bypass capacitor of around 0.1 μF between V_{CC} and V_{SS} pins near the device.

MB90540/540G/545/545G Series

(6) Pull-up/down resistors

The MB90540/545 Series does not support internal pull-up/down resistors (except Port0 – Port3 : pull-up resistors) . Use external components where needed.

(7) Crystal Oscillator Circuit

Noises around X0 or X1 pins may be possible causes of abnormal operations. Make sure to provide bypass capacitors via the shortest distances from X0, X1 pins, crystal oscillator (or ceramic resonator) and ground lines, and make sure, to the utmost effort, that lines of oscillation circuits do not cross the lines of other circuits. It is highly recommended to provide a printed circuit board artwork surrounding X0 and X1 pins with a ground area for stabilizing the operation.

(8) Turning-on Sequence of Power Supply to A/D Converter and Analog Inputs

Make sure to turn on the A/D converter power supply (AV_{CC} , AV_{RH} , AV_{RL}) and analog inputs (AN0 to AN7) after turning-on the digital power supply (V_{CC}) .

Turn-off the digital power after turning off the A/D converter supply and analog inputs. In this case, make sure that the voltage does not exceed AV_{RH} or AV_{CC} (turning on/off the analog and digital power supplies simultaneously is acceptable) .

(9) Connection of Unused Pins of A/D Converter

Connect unused pins of A/D converter to $AV_{CC} = V_{CC}$, $AV_{SS} = AV_{RH} = V_{SS}$.

(10) N.C. Pin

The N.C. (internally connected) pin must be opened for use.

(11) Notes on Energization

To prevent the internal regulator circuit from malfunctioning, set the voltage rise time during energization at 50 μ s or more (0.2 V to 2.7 V) .

MB90540/540G/545/545G Series

(12) Indeterminate outputs from ports 0 and 1 (MB90F543/F549/V540/V540G only)

During oscillation setting time of step-down circuit (during a power-on reset) after the power is turned on, the outputs from ports 0 and 1 become following state.

- If $\overline{\text{RST}}$ pin is "H", the outputs become indeterminate.
- If $\overline{\text{RST}}$ pin is "L", the outputs become high-impedance.

Pay attention to the port output timing shown as follow.

• $\overline{\text{RST}}$ pin is "H"

*1 : Power-on reset time : Period of "clock frequency $\times 2^{17}$ " (Clock frequency of 16 MHz : 8.19 ms)

*2 : Oscillation setting time : Period of "clock frequency $\times 2^{18}$ " (Clock frequency of 16 MHz : 16.38 ms)

MB90540/540G/545/545G Series

- $\overline{\text{RST}}$ pin is “L”

*1 : Power-on reset time : Period of “clock frequency $\times 2^{17}$ ” (Clock frequency of 16 MHz : 8.19 ms)

*2 : Oscillation setting time : Period of “clock frequency $\times 2^{18}$ ” (Clock frequency of 16 MHz : 16.38 ms)

(13) Initialization

In the device, there are internal registers which are initialized only by a power-on reset. To initialize these registers, please turn on the power again.

(14) Directions of “DIV A, Ri” and “DIVW A, RWi” instructions

In the Signed multiplication and division instructions (“DIV A, Ri” and “DIVW A, RWi”), the value of the corresponding bank register (DTB, ADB, USB, SSB) is set in “00H”.

If the values of the corresponding bank registers (DTB, ADB, USB, SSB) are set to other than “00H”, the remainder by the execution result of the instruction is not stored in the register of the instruction operand.

(15) Using REALOS

The use of EI²OS is not possible with the REALOS real time operating system.

(16) Caution on Operations during PLL Clock Mode

If the PLL clock mode is selected, the microcontroller attempt to be working with the self-oscillating circuit even when there is no external oscillator or external clock input is stopped. Performance of this operation, however, cannot be guaranteed.

*1 : 002000_H for MB90F549

*2 : Under development

Note : The high-order portion of bank 00 gives the image of the FF bank ROM to make the small model of the C compiler effective. Since the low-order 16 bits address are the same, the table in ROM can be referenced without using the “far” specification in the pointer declaration.

For example, an attempt to access 00C000_H accesses the value at FFC000_H in ROM. The ROM area in bank FF exceeds 48 Kbytes, and its entire image cannot be shown in bank 00. The image between FF4000_H and FFFFFF_H is visible in bank 00, while the image between FF0000_H and FF3FFF_H is visible only in bank FF.

- Read/write notation

R/W : Reading and writing permitted

R : Read-only

W : Write-only

- Initial value notation

0 : Initial value is "0".

1 : Initial value is "1".

X : Initial value is undefined.

— : Initial value is unused.

Note : Addresses in the range 0000_H to 00FF_H, which are not listed in the table, are reserved for the primary functions of the MCU. A read access to these reserved addresses results in an "X" reading and any write access should not be performed.

MB90540/540G/545/545G Series

■ CAN CONTROLLER

The MB90540 series contains two CAN controllers (CAN0 and CAN1), the MB90545 series contains only one (CAN0). The Evaluation Chip MB90V540 also has two CAN controllers.

The CAN controller has the following features:

- Conforms to CAN Specification Version 2.0 Part A and B
 - Supports transmission/reception in standard frame and extended frame formats
- Supports transmission of data frames by receiving remote frames
- 16 transmitting/receiving message buffers
 - 29-bit ID and 8-byte data
 - Multi-level message buffer configuration
- Provides full-bit comparison, full-bit mask, acceptance register 0/acceptance register 1 for each message buffer as ID acceptance mask
 - Two acceptance mask registers in either standard frame format or extended frame formats
- Bit rate programmable from 10 Kbps to 1 Mbps (when input clock is at 16 MHz)

MB90540/540G/545/545G Series

*1 : The interrupt request flag is cleared by the EI²OS interrupt clear signal.

*2 : The interrupt request flag is cleared by the EI²OS interrupt clear signal. A stop request is available.

Note :

- N/A : The interrupt request flag is not cleared by the EI²OS interrupt clear signal.
- For a peripheral module with two interrupt causes for a single interrupt number, both interrupt request flags are cleared by the EI²OS interrupt clear signal.
- At the end of EI²OS, the EI²OS clear signal will be asserted for all the interrupt flags assigned to the same interrupt number. If one interrupt flag starts the EI²OS and in the meantime another interrupt flag is set by a hardware event, the later event is lost because the flag is cleared by the EI²OS clear signal caused by the first event. So it is recommended not to use the EI²OS for this interrupt number.
- If EI²OS is enabled, EI²OS is initiated when one of the two interrupt signals in the same interrupt control register (ICR) is asserted. This means that different interrupt sources share the same EI²OS Descriptor which should be unique for each interrupt source. For this reason, when one interrupt source uses the EI²OS, the other interrupt should be disabled.

Power consumption	P_D	—	500	mW	Flash device
		—	400	mW	Mask ROM
Operating temperature	T_A	-40	+85	°C	MB90F543/F549
		-40	+105	°C	Other than MB90F543/F549
Storage temperature	T_{STG}	-55	+150	°C	

*1 : AV_{CC} , $AVRH$, $AVRL$ should not exceed V_{CC} . Also, $AVRH$, $AVRL$ should not exceed AV_{CC} , and $AVRL$ does not exceed $AVRH$.

*2 : V_I and V_O should not exceed $V_{CC} + 0.3\text{ V}$. V_I should not exceed the specified ratings. However if the maximum current to/from an input is limited by some means with external components, the I_{CLAMP} rating supercedes the V_I rating.

*3 : The maximum output current is a peak value for a corresponding pin.

*4 : Average output current is an average current value observed for a 100 ms period for a corresponding pin.

*5 : Total average current is an average current value observed for a 100 ms period for all corresponding pins.

*6 : • Applicable to pins : P00 to P07, P10 to P17, P20 to P27, P30 to P37, P40 to P47, P50 to P57, P60 to P67, P70 to P77, P80 to P87, P90 to P97, PA0

• Use within recommended operating conditions.

• Use at DC voltage (current) .

• The +B signal should always be applied with a limiting resistance placed between the +B signal and the microcontroller.

• The value of the limiting resistance should be set so that when the +B signal is applied the input current to the microcontroller pin does not exceed rated values, either instantaneously or for prolonged periods.

• Note that when the microcontroller drive current is low, such as in the power saving modes, the +B input potential may pass through the protective diode and increase the potential at the V_{CC} pin, and this may affect other devices.

• Note that if a +B signal is input when the microcontroller current is off (not fixed at 0 V) , the power supply is provided from the pins, so that incomplete operation may result.

• Note that if the +B input is applied during power-on, the power supply is provided from the pins and the resulting supply voltage may not be sufficient to operate the power-on result.

(Continued)

MB90540/540G/545/545G Series

(Continued)

- Care must be taken not to leave the +B input pin open.
- Note that analog system input/output pins other than the A/D input pins (LCD drive pins, comparator input pins, etc.) cannot accept +B signal input.
- Sample recommended circuits :

Note : Average output current = operating current $\times$ operating efficiency

WARNING: Semiconductor devices can be permanently damaged by application of stress (voltage, current, temperature, etc.) in excess of absolute maximum ratings. Do not exceed these ratings.

MB90540/540G/545/545G Series

2. Recommended Conditions

($V_{SS} = AV_{SS} = 0.0\text{ V}$)

Parameter	Symbol	Value			Units	Remarks
		Min	Typ	Max		
Power supply voltage	V_{CC}, AV_{CC}	4.5	5.0	5.5	V	Under normal operation : Other than MB90F548GL(S)/543G(S)/547G(S)/548G(S)

Operating temperature	T_A	-40	—	+85	$^{\circ}\text{C}$	MB90F543/F549
		-40	—	+105	$^{\circ}\text{C}$	Other than MB90F543/F549

*: Use a ceramic capacitor or a capacitor of better 4. AC characteristics. The bypass capacitor should be greater than this capacitor.

WARNING: The recommended operating conditions are required in order to ensure the normal operation of the semiconductor device. All of the device's electrical characteristics are warranted when the device is operated within these ranges.

Always use semiconductor devices within their recommended operating condition ranges. Operation outside these ranges may adversely affect reliability and could result in device failure.

No warranty is made with respect to uses, operating conditions, or combinations not represented on the data sheet. Users considering application outside the listed conditions are advised to contact their FUJITSU representatives beforehand.

(3) Reset and Hardware Standby Input Timing

(MB90F543/F549 : $V_{CC} = 5.0 \text{ V} \pm 10\%$, $V_{SS} = AV_{SS} = 0.0 \text{ V}$, $T_A = -40^\circ\text{C}$ to $+85^\circ\text{C}$)

(MB90543G(S)/547G(S)/548G(S)/F548GL(S): $V_{CC} = 3.5 \text{ V}$ to 5.5 V , $V_{SS} = AV_{SS} = 0.0 \text{ V}$, $T_A = -40^\circ\text{C}$ to $+105^\circ\text{C}$)

(Other than MB90F543/F549/543G(S)/547G(S)/548G(S)/F548GL(S):

$V_{CC} = 5.0 \text{ V} \pm 10\%$, $V_{SS} = AV_{SS} = 0.0 \text{ V}$, $T_A = -40^\circ\text{C}$ to $+105^\circ\text{C}$)

Parameter	Symbol	Pin name	Value		Units	Remarks
			Min	Max		
Reset input time	t_{RSTL}	$\overline{RST}$	$4 t_{CP}$	—	ns	Under normal operation
			Oscillation time of oscillator + $4 t_{CP}$	—	ms	In stop mode
			100	—	μs	In pseudo timer mode (MB90543G (S) /547G (S) / 548G (S))
			$4 t_{CP}$	—	ns	In pseudo timer mode (Other than MB90543G (S) / 547G (S) /548G (S))
			$2 t_{CP}$	—	μs	In sub-clock mode, sub-sleep mode, timer mode
Hardware standby input time	t_{HSTL}	$\overline{HST}$	$4 t_{CP}$	—	ns	Under normal operation

Note : " t_{CP} " represents one cycle time of the machine clock.

Oscillation time of oscillator is time that amplitude reached the 90%. In the crystal oscillator, the oscillation time is between several ms to tens of ms. In FAR/ceramic oscillator, the oscillation time is between hundreds of μs to several ms. In the external clock, the oscillation time is 0 ns.

Any reset can not fully initialize the Flash Memory if it is performing the automatic algorithm.

MB90540/540G/545/545G Series

- In under normal operation, pseudo timer mode, sub-clock mode, sub-sleep mode, timer mode

- In stop mode

(4) Power On Reset

(MB90F543/F549 : $V_{CC} = 5.0 \text{ V} \pm 10\%$, $V_{SS} = AV_{SS} = 0.0 \text{ V}$, $T_A = -40^\circ\text{C}$ to $+85^\circ\text{C}$)

(MB90543G(S)/547G(S)/548G(S)/F548GL(S): $V_{CC} = 3.5 \text{ V}$ to 5.5 V , $V_{SS} = AV_{SS} = 0.0 \text{ V}$, $T_A = -40^\circ\text{C}$ to $+105^\circ\text{C}$)

(Other than MB90F543/F549/543G(S)/547G(S)/548G(S)/F548GL(S):

$V_{CC} = 5.0 \text{ V} \pm 10\%$, $V_{SS} = AV_{SS} = 0.0 \text{ V}$, $T_A = -40^\circ\text{C}$ to $+105^\circ\text{C}$)

Parameter	Symbol	Pin name	Condition	Value		Units	Remarks
				Min	Max		
Power on rise time	t_R	V_{CC}	—	0.05	30	ms	*
Power off time	t_{OFF}	V_{CC}		50	—	ms	Due to repetitive operation

* : V_{CC} must be kept lower than 0.2 V before power-on.

Note : • The above values are used for creating a power-on reset.

- Some registers in the device are initialized only upon a power-on reset. To initialize these register, turn on the power supply using the above values.

Sudden changes in the power supply voltage may cause a power-on reset.

To change the power supply voltage while the device is in operation, it is recommended to raise the voltage smoothly to suppress fluctuations as shown below.

In this case, change the supply voltage with the PLL clock not used. If the voltage drop is 1 V or fewer per second, however, you can use the PLL clock.

MB90540/540G/545/545G Series

* : When not using an A/D converter, this is the current ($V_{CC} = AV_{CC} = AVR_H = 5.0 \text{ V}$) when the CPU is stopped.

Note: The functionality of the A/D converter is only guaranteed for $V_{CC} = 5.0 \text{ V} \pm 10\%$ (also for MB90543G(S)/547G (S) /548GL (S) /F548GL (S)).

• A/D Converter Glossary

Resolution : Analog changes that are identifiable with the A/D converter

Linearity error : The deviation of the straight line connecting the zero transition point ("00 0000 0000" $\leftrightarrow$ "00 0000 0001") with the full-scale transition point ("11 1111 1110" $\leftrightarrow$ "11 1111 1111") from actual conversion characteristics

Differential linearity error : The deviation of input voltage needed to change the output code by 1 LSB from the theoretical value

Total error : The total error is defined as a difference between the actual value and the theoretical value, which includes zero-transition error/full-scale transition error and linearity error.

$$1 \text{ LSB} = (\text{Theoretical value}) \frac{AVRH - AVRL}{1024} [\text{V}]$$

$$V_{OT} (\text{Theoretical value}) = AVRL + 0.5 \text{ LSB} [\text{V}]$$

$$V_{FST} (\text{Theoretical value}) = AVRH - 1.5 \text{ LSB} [\text{V}]$$

$$\text{Total error for digital output } N = \frac{V_{NT} - \{1 \text{ LSB} \times (N - 1) + 0.5 \text{ LSB}\}}{1 \text{ LSB}} [\text{LSB}]$$

V_{NT} : Voltage at a transition of digital output from $(N - 1)$ to N

(Continued)

MB90540/540G/545/545G Series

(Continued)

$$\text{Linearity error of digital output } N = \frac{V_{NT} - \{1 \text{ LSB} \times (N - 1) + V_{OT}\}}{1 \text{ LSB}} [\text{LSB}]$$

$$\text{Differential linearity error of digital } N = \frac{V_{(N+1)T} - V_{NT}}{1 \text{ LSB}} - 1 \text{ LSB} [\text{LSB}]$$

$$1 \text{ LSB} = \frac{V_{FST} - V_{OT}}{1022} [\text{V}]$$

V_{OT} : Voltage at transition of digital output from "000_H" to "001_H"

V_{FST} : Voltage at transition of digital output from "3FE_H" to "3FF_H"

• Notes on Using A/D Converter

- Select the output impedance value for the external circuit of analog input according to the following conditions, :
- Output impedance values of the external circuit of 15 kΩ or lower are recommended.
- When capacitors are connected to external pins, the capacitance of several thousand times the internal capacitor value is recommended to minimized the effect of voltage distribution between the external capacitor and internal capacitor.

Note : When the output impedance of the external circuit is too high, the sampling period for analog voltages may not be sufficient (sampling period = 4.00 μs @machine clock of 16 MHz) .

• Equipment of analog input circuit model

• Error

The smaller the $|AVRH - AVRL|$, the greater the error would become relatively.

MB90540/540G/545/545G Series

All Rights Reserved.

The contents of this document are subject to change without notice. Customers are advised to consult with FUJITSU sales representatives before ordering.

The information and circuit diagrams in this document are presented as examples of semiconductor device applications, and are not intended to be incorporated in devices for actual use. Also, FUJITSU is unable to assume responsibility for infringement of any patent rights or other rights of third parties arising from the use of this information or circuit diagrams.

The products described in this document are designed, developed and manufactured as contemplated for general use, including without limitation, ordinary industrial use, general office use, personal use, and household use, but are not designed, developed and manufactured as contemplated (1) for use accompanying fatal risks or dangers that, unless extremely high safety is secured, could have a serious effect to the public, and could lead directly to death, personal injury, severe physical damage or other loss (i.e., nuclear reaction control in nuclear facility, aircraft flight control, air traffic control, mass transport control, medical life support system, missile launch control in weapon system), or (2) for use requiring extremely high reliability (i.e., submersible repeater and artificial satellite).

Please note that Fujitsu will not be liable against you and/or any third party for any claims or damages arising in connection with above-mentioned uses of the products.

Any semiconductor devices have an inherent chance of failure. You must protect against injury, damage or loss from such failures by incorporating safety design measures into your facility and equipment such as redundancy, fire protection, and prevention of over-current levels and other abnormal operating conditions.

If any products described in this document represent goods or technologies subject to certain restrictions on export under the Foreign Exchange and Foreign Trade Law of Japan, the prior authorization by Japanese government will be required for export of those products from Japan.
