

January 2003

## Features

- 3.45V Single Supply Operation
- Low Power Dissipation: 210mW typ
- Broadband: DC to 6GHz
- SSB Phase Noise:  $-148\text{dBc/Hz}$  @ 10KHz
- Pout 3dBm

## Prescaler Modulus

- ZL40804 – Divide by 4

## Applications

- DC to 6 GHz PLL applications
- HyperLan
- LMDS
- Instrumentation
- Satellite Communications
- Fibre Optic Communications; OC48, OC192
- Ultra Low Jitter Clock Systems

## Ordering Information

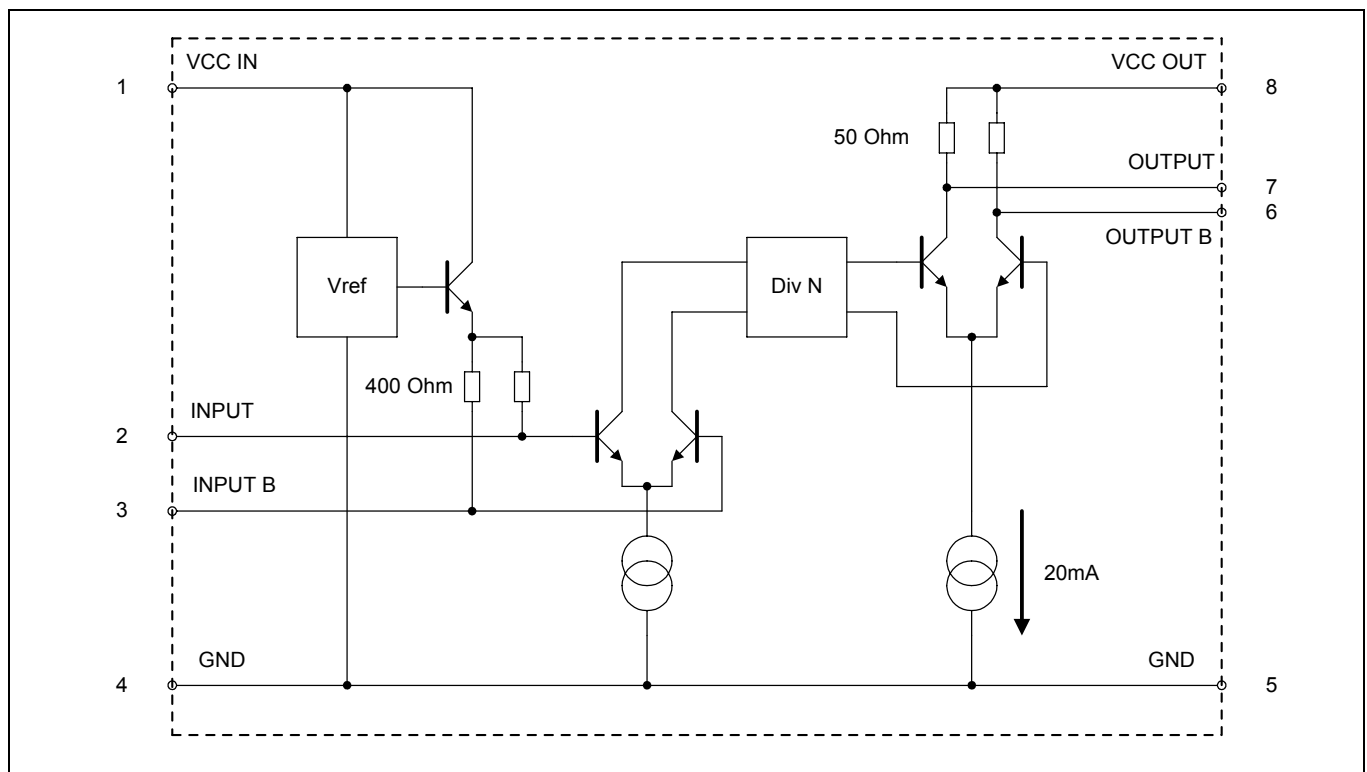

ZL40804/DCA (tubes)	8 pin SOIC
ZL40804/DCB (tape and reel)	8 pin SOIC

**-40°C to +85°C**

## Description

The ZL40804 are Bipolar 3.45V supply, very low power prescalers for professional applications with a fixed modulus of 4. The ultra low close in (10KHz offset) SSB phase noise performance is ideal for narrow band communications systems or systems with ultra low jitter budgets such as next generation fibre optic communications. The devices are broadband from DC to 6GHz.

See Figure 1 and Application Note for RF Prescalers for more details.

**Figure 1 - Functional Block Diagram**

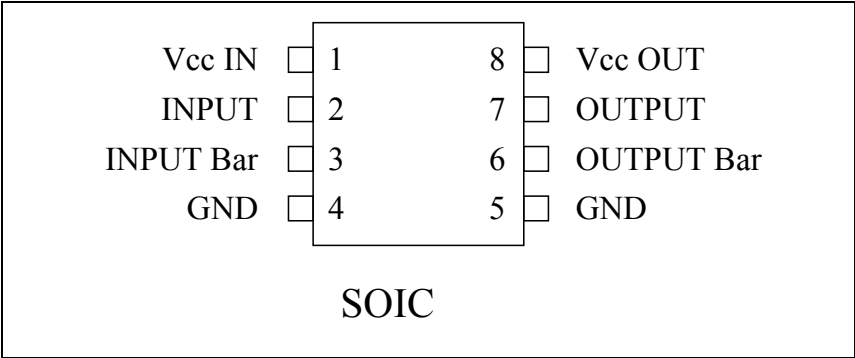

Figure 2 - Pin Connections – Top View

Application Configuration

Figure 3 shows a recommended application configuration. This example shows the device set up for single ended operation.

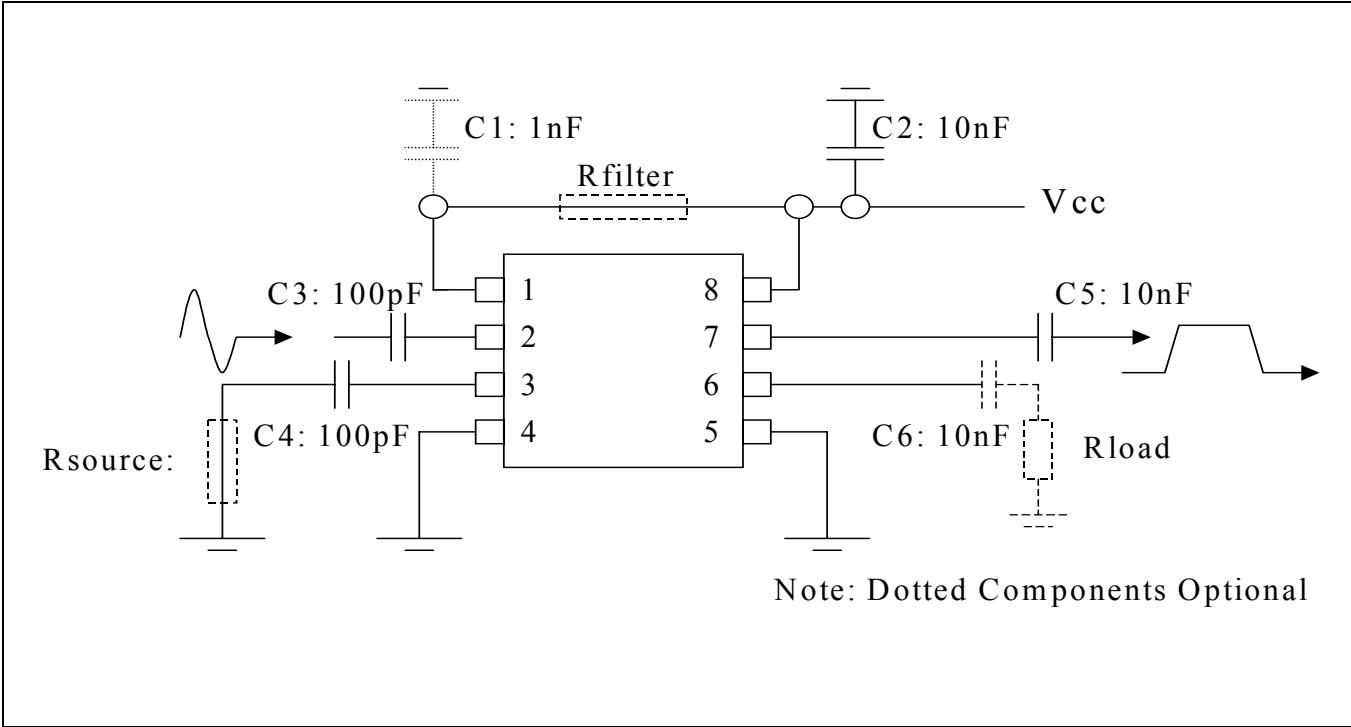

Figure 3 - Recommended circuit configuration

This represents the circuit used to complete characterisation. The tabulated Electrical performance is guaranteed using this application circuit.

A blank application board is available.

## Circuit Options

The application circuit includes some optional components that may be required to improve tolerance of system noise present in the application.

**Dummy R source** may be added to the inverting input to provide a better matched source impedance at the input. This will improve the rejection of common mode noise present within the system.

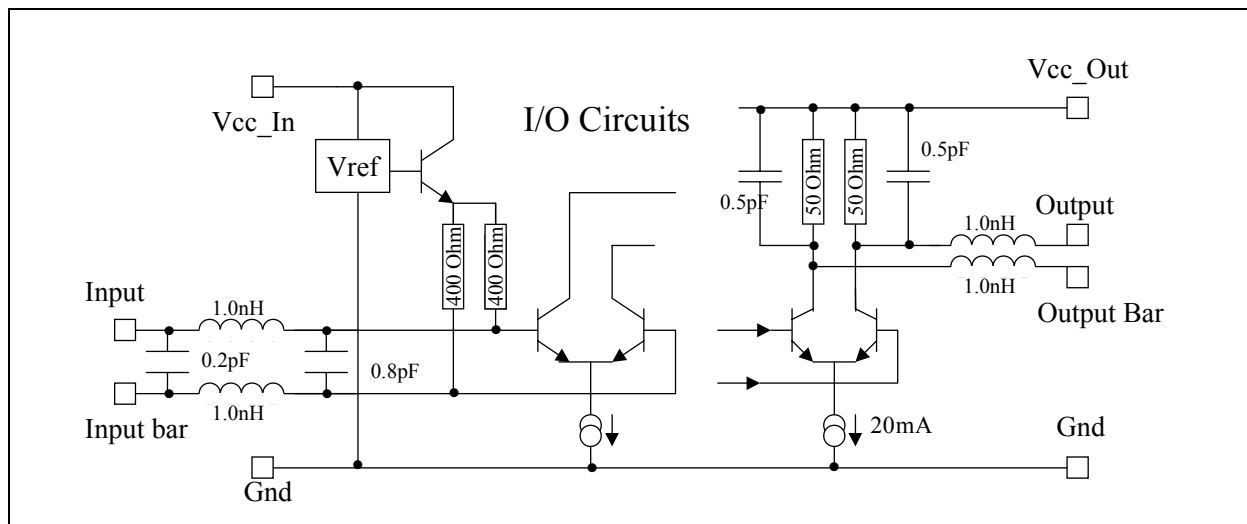

**Dummy R load** may be added to the inverting output to provide better matched load at the output. This will reduce the radiated EMI at the output and reduce the Output Noise present on the supply rail.

**Rfilter** can be inserted between the Vcc\_In and the Vcc\_out to provide additional filtering to the input Vcc. The input Vcc powers the input bias reference only and can be a sensitive point to system noise. The nominal input current at Vcc\_In is 0.35mA. An alternative would be to use an inductive choke.

**C1** is additional Supply Filtering and should be added with Rfilter. The IC includes 10pF of on Chip Supply Filtering.

## Input & Output Circuit

Fig 4 shows the equivalent input and output circuit.

**Figure 4 - Input and Output Equivalent Circuit**

Figure 5 - ZL40804 Typical Phase Noise

**Absolute Maximum Ratings**

	Parameter	Symbol	Min	Max	Units	Comments
1	Supply voltage	Vcc	- 0.5	6	V	
2	RFin			12	dBm	
3	All I/O ports		-0.5	Vcc+0.5	V	
4	Storage temperature	T <sub>ST</sub>	-55	150	°C	
5	ESD protection			2	kV	Mil-std 883B / 3015 cat1

**Operating Range**

Characteristic	Min	Typ	Max	Units	Comments
Supply Voltage (Vcc)	3.3		3.6	V	
RFin Frequency Range	0.1		6	GHz	
Operating Junction Temperature	-40		+125	°C	
Junc'n to Amb't resistance Theta Ja		150		°C/W	4 layer FR4 Board
Junc'n to Case resistance Theta Jc		60		°C/W	4 layer FR4 Board

## AC/DC Characteristics

### Electrical Characteristics<sup>†</sup>

Characteristic	Pin	Min.	Typ.	Max.	Units	Conditions
I <sub>cc_in</sub> (Supply current)	1		0.35		mA	
I <sub>cc_out</sub> (Supply current)	8	36	61	96	mA	
Input frequency	2,3	1		6	GHz	RMS sinewave,
Input sensitivity	2,3		-20	-10	dBm	f <sub>in</sub> = 1GHz to 6GHz, Note 1
Input overload	2,3	4	10		dBm	f <sub>in</sub> = 1GHz to 6GHz, Note 1
Phase Noise	6,7		-150		dBc/Hz	@ 10KHz Offset F <sub>in</sub> = 3GHz
Output voltage	6,7		1		Vp-p	Differential Into 50ohm pull up resistors
Output power	6,7	-7	-2	2	dBm	f <sub>in</sub> = 1GHz to 6GHz, P <sub>in</sub> = -10dBm, Note 2
Output t-rise	6,7		110		ps	f <sub>in</sub> = 1GHz to 6GHz, P <sub>in</sub> = -10dBm
Output t-fall	6,7		110		ps	f <sub>in</sub> = 1GHz to 6GHz, P <sub>in</sub> = -10dBm
T – prop delay	2,6		250		ps	50% IN to 50% OUT
Jitter			0.1		ps	
Output Duty Cycle	6,7	45	50	55	%	f <sub>in</sub> = 1GHz to 6GHz, I <sub>n</sub> = -10dBm
Input. Edge Speed		500			V/us	For < 1GHz input operation

<sup>†</sup> These characteristics are guaranteed by design and characterisation over the following range of operating conditions unless otherwise stated:  
T<sub>amb</sub> = -40°C to +85°C, V<sub>cc</sub> = 3.3V to 3.6V

Note 1: P<sub>in</sub> = power measured into 50 ohm Load from 50 ohm Source.

Note 2: P<sub>out</sub> Single Ended AC coupled Single 50 ohm Termination.

For details of the test set-up, refer to the Application Note for RF Prescalers.

(Vcc = 3.3V, T=25C, T=85C)

**Figure 10 - ZL40804 Pout / Input Frequency**  
(Vcc = 3.6V, T=25C, T=85C)

## Single Ended or Differential Load

Figures 11 and 12 illustrate the output waveform when measured differential and single ended with a 5GHz waveform at the input at a level of +2dBm. The single ended output contains some input frequency break through which contributes to the distortion present. This is a common mode signal which is rejected if the output is taken differentially.

Differential operation also provides an additional 6dB output power.

Differential Operation reduces the radiated EMI in the system and reduces the susceptibility to common mode system noise.
