#### 100371

## Low Power Triple 4-Input Multiplexer with Enable

#### **General Description**

The 100371 contains three 4-input multiplexers which share a common decoder (inputs  $S_0$  and  $S_1). Output buffer gates provide true and complement outputs. A HIGH on the Enable input <math display="inline">(\overline{E})$  forces all true outputs LOW (see Truth Table). All inputs have 50  $k\Omega$  pull-down resistors.

#### **Features**

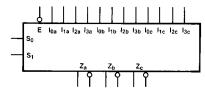

- 35% power reduction of the 100171
- 2000V ESD protection
- Pin/function compatible with 100171
- Voltage compensated operating range = -4.2V to -5.7V
- Available to industrial grade temperature range

## Recommended Operating Conditions

Case Temperature (T<sub>C</sub>)

 $\begin{array}{lll} \mbox{Commercial} & 0 \mbox{°C to } +85 \mbox{°C} \\ \mbox{Industrial} & -40 \mbox{°C to } +85 \mbox{°C} \\ \mbox{Supply Voltage (V_{EE})} & -5.7 \mbox{V to } -4.2 \mbox{V} \\ \end{array}$ 

Note 1: The "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the Electrical Characteristics tables are not guaranteed at the absolute maximum rating. The "Recommended Operating Conditions" table will define the conditions for actual device operation.

Note 2: ESD testing conforms to MIL-STD-883, Method 3015.

Note 3: The specified limits represent the "worst case" value for the parameter. Since these values normally occur at the temperature extremes, additional noise immunity and guardbanding can be achieved by decreasing the allowable system operating ranges. Conditions for testing shown in the tables are chosen to guarantee operation under "worst case" conditions.

The specifications apply to any outputs switching in the same direction either HIGH-to-LOW (t<sub>OSHL</sub>), or LOW-to-HIGH (t<sub>OSLH</sub>), or in opposite directions both HL and LH (t<sub>OST</sub>). Parameters t<sub>OST</sub> and t<sub>PS</sub> guaranteed by design.
