

NTC THERMISTORS: TYPE B35/43

GLASS COATED BEAD THERMISTOR

DESCRIPTION:

Large glass coated bead thermistors on fine diameter platinum alloy lead-wires.

FEATURES:

- Suitable for most low cost temperature measurement, control or compensation applications
- Fast thermal response times
- Special thin glass coatings provide hermetic seal.
- Suitable for self-heated applications such as liquid level sensing or gas flow measurement.
- Normal operating/storage temperatures range from -80°C to:
 - 105°C for Material system E0
 - 200°C for Material systems A1 through A4
 - 300°C for Material systems A5 through D17
- Unaffected by severe environmental exposures, including nuclear radiation.
- Intermittent operation to 600°C is permissible, however, stability will be degraded.

OPTIONS:

- Non-standard resistance tolerances
- Non-standard resistance values
- Reference temperature(s) other than 25°C - specify
- Mounting in special housings or enclosures
- Longer continuous leads
- Welded or soldered extension leads - specify lead material, diameter, length and insulation, if any.
- Solderable or weldable and solderable leads
- Calibration - specify temperature(s)
- Interchangeable pairs or sets, R-vs-T curve matching – specify temperature range(s) and tolerance(s)
- Special aging and conditioning for high reliability applications

CODING:

The code number to be ordered may be specified as follows:

NOTE 1: Special tolerances are available upon request. Consult factory for special resistance tolerances, non-standard resistances and/or non-standard temperatures.

NOTE 2: The zero-power resistance at 25°C, expressed in Ohms, is identified by a three digit code number. The first two digits represent significant figures, and the last digit specifies the number of zeros to follow. Example: 10k Ohms= "103". The standard resistance values are from the 24-Value series decade as specified in Military Standard MS90178.
