

RED DLR1414
HIGH EFFICIENCY RED DLO1414
GREEN DLG1414
0.145" 4-Character 5 x 7 Dot Matrix
Alphanumeric Intelligent Display® Devices
with Memory/Decoder/Driver

FEATURES

- **0.145" High, Dot Matrix Character**
- **128 Special ASCII Characters for English, German, Italian, Swedish, Danish, and Norwegian Languages**
- **Wide Viewing Angle: X Axis $\pm 50^\circ$, Y Axis $\pm 75^\circ$**
- **Close Vertical Row Spacing, 0.800" Centers**
- **Fast Access Time, 110 ns at 25°C**
- **Compact Size for Hand Held Equipment**
- **Built-in Memory**
- **Built-in Character Generator**
- **Built-in Multiplex and LED Drive Circuitry**
- **Direct Access to Each Digit Independently and Asynchronously**
- **TTL Compatible, 5.0 Volt Power**
- **Low Power Consumption, 20 mA per Character Typical**
- **Intensity Coded for Display Uniformity**
- **Extended Operating Temperature Range: -40°C to +85°C**
- **End Stackable, 4-Character Package**

See Appnotes 18, 19, 22, and 23 for additional information.

DESCRIPTION

The DLR/DLO/DLG1414 is a four digit 5 x 7 dot matrix display module with a built-in CMOS integrated circuit.

The integrated circuit contains memory, ASCII ROM decoder, multiplex circuitry and drivers. Data entry is asynchronous and random. A display system can be built using any number of DLX1414s since each character in any DLX1414 can be addressed independently and will continue to display the character last stored until replaced by another.

System interconnection is very straightforward. The least significant two address bits (A0, A1) are normally connected to the like named inputs of all displays in the system. Data lines are connected to all DLX1414s directly and in parallel as is the write line (\overline{WR}). The display then will behave as a write only memory.

The DLX1414 has several features superior to competitive devices. The character set consists of 128 special ASCII characters for English, German, Italian, Swedish, Danish, and Norwegian.

Maximum Ratings

DC Supply Voltage -0.5 to +7.0 Vdc
 Input Voltage Levels Relative
 to GND (all inputs) -0.5 to $V_{CC} + 0.5$ Vdc
 Operating Temperature -40°C to +85°C
 Storage Temperature -40°C to +100°C
 Maximum Solder Temperature 063" (1.59 mm)
 below Seating Plane, $t < 5.0$ s 260°C
 Relative Humidity at 85°C 85%

Optical Characteristics

Spectral Peak Wavelength

Red 660 nm typ.
 High Efficiency Red (HER) 630 nm typ.
 Green 565 nm typ.

Viewing Angle (off normal axis)

Horizontal $\pm 50^\circ$
 Vertical $\pm 75^\circ$

Character Height 0.145"

Time Averaged Luminous Intensity ⁽¹⁾

(100% brightness, $V_{CC}=5.0$ V)

Red 50 μ cd/LED typ.
 HER 60 μ cd/LED typ.
 Green 70 μ cd/LED typ.

LED to LED Intensity Matching 1.8:1.0 max.

LED to LED Hue Matching at $V_{CC}=5.0$ V

(Green only) ± 2.0 nm max.

Note:

¹⁾ Peak luminous intensity values can be calculated by multiplying these values by 7.

Figure 3. Typical Interconnection for 32 Characters

The diagram illustrates the hardware architecture of a character display system based on the 8085 microprocessor. The 8085 is connected to RAM Memory (4 X 7 bit) and ROM (128 X 35 Bit ASCII Character Decode, 4480 bits). The RAM Memory is connected to the 8085 via data bus D0-D7 and address bus A0-A1. The ROM is connected to the 8085 via address bus A0-A1 and data bus D0-D7. The 8085 is also connected to an OSC (Oscillator) and a Timing and Control Logic block. The Timing and Control Logic block is connected to the RAM Memory, ROM, and Display. The Display is connected to the 8085 via address bus A0-A1 and data bus D0-D7. The Display is connected to a Column Enable Latches and Column Drivers block. The Column Enable Latches and Column Drivers block is connected to the ROM and the Display.

				ASCII CODE																	
				D0	0	1	0	1	0	1	0	1	0	1	0	1	0	1	0	1	
				D1	0	0	1	1	0	0	1	1	0	0	1	1	0	0	1	1

1	1	1	7																		

1. High=1 level
2. Low=0 level
3. Upon power up, the device will initialize in a random state.

Design Considerations

For details on design and applications of the DLX1414 using standard bus configurations in multiple display systems, or parallel I/O devices, such as the 8255 with an 8080 or memory mapped addressing on processors such as the 8080, Z80, 6502, 8748, or 6800, refer to Appnote 15 at www.infineon.com/opto.

Electrical & Mechanical Considerations

Voltage Transient Suppression

We strongly recommend that the same power supply be used for the display and the components that interface with the display to avoid logic inputs higher than V_{CC} . Additionally, the LEDs may cause transients in the power supply line while they change display states. The common practice is to place .01 mF capacitors close to the displays across V_{CC} and GND, one for each display, and one 10 mF capacitor for every second display.

ESD Protection

The metal gate CMOS IC of the DLX1414 is extremely immune to ESD damage. However, users of these devices are encouraged to take all the standard precautions, normal for CMOS components. These include properly grounding personnel, tools, tables, and transport carriers that come in contact with unshielded parts. Where these conditions are not, or cannot be met, keep the leads of the device shorted together or the parts in anti-static packaging.

Soldering Considerations

The DLX1414 can be hand soldered with SN63 solder using a grounded iron set to 260°C.

Wave soldering is also possible following these conditions: Pre-heat that does not exceed 93°C on the solder side of the PC board or a package surface temperature of 85°C. Water soluble organic acid flux (except carboxylic acid) or rosin-based RMA flux without alcohol can be used.

Wave temperature of 245°C \pm 5°C with a dwell between 1.5 sec. to 3.0 sec. Exposure to the wave should not exceed temperatures above 260°C for five seconds at 0.063" below the seating plane. The packages should not be immersed in the wave.

Post Solder Cleaning Procedures

The least offensive cleaning solution is hot D.I. water (60°C) for less than 15 minutes. Addition of mild saponifiers is acceptable. Do not use commercial dishwasher detergents.

For faster cleaning, solvents may be used. Carefully select solvents as some may chemically attack the nylon package. Maximum exposure should not exceed two minutes at elevated temperatures. Acceptable solvents are TF (trichlorotrifluoroethane), TA, 111 Trichloroethane, and unheated acetone.

Note: Acceptable commercial solvents are: Basic TF, Arklone P, Genesolve D, Blaco-tron TF, Freon TA, Genesolve DA, and Blaco-tron TA.

Unacceptable solvents contain alcohol, methanol, methylene chloride, ethanol, TP35, TCM, TMC, TMS+, TE, or TES. Since many commercial mixtures exist, contact a solvent vendor for chemical composition information. Some major solvent manufacturers are: Allied Chemical Corporation, Specialty Chemical Division, Morristown, NJ; Baron-Blakeslee, Chicago, IL; Dow Chemical, Midland, MI; E.I. DuPont de Nemours & Co., Wilmington, DE.

For further information refer to Appnotes 18 and 19 at www.infineon.com/opto.

An alternative to soldering and cleaning the display modules is to use sockets. Eighteen pin DIP sockets .600" wide with .100" centers work well for single displays. Multiple display assemblies are best handled by longer SIP sockets or DIP sockets when available for uniform package alignment. Socket manufacturers are Aries Electronics, Inc., Frenchtown, NJ; Garry Manufacturing, New Brunswick, NJ; Robinson-Nugent, New Albany, IN; and Samtec Electronic Hardware, New Albany, IN.

For further information refer to Appnote 22 at www.infineon.com/opto.

Optical Considerations

The .145" high characters of the DLX1414 gives readability up to eight feet. The user can build a display that enhances readability over this distance by proper filter selection.

Using filters emphasizes the contrast ratio between a lit LED and the character background. This will increase the discrimination of different characters. The only limitation is cost. Remember to take into consideration the ambient lighting environment for the best cost/benefit ratio for filters.

Incandescent (with almost no green) or fluorescent (with almost no red) lights do not have the flat spectral response of sunlight. Plastic band-pass filters are an inexpensive and effective way to strengthen contrast ratios. The DLR1414 is a standard red display and should be matched with long wavelength pass filter in the 600 nm to 620 nm range. For displays of multiple colors, neutral density grey filters offer the best compromise.

The DLO1414 is a high efficiency red display and should be matched with a long wavelength pass filter in the 570 nm to 590 nm range. The DLG1414 should be matched with a yellow-green band-pass filter that peaks at 565 nm. For displays of multiple colors, neutral density gray filters offer the best compromise.

Additional contrast enhancement can be gained by shading the displays. Plastic band-pass filters with built-in louvers offer the next step up in contrast improvement. Plastic filters can be improved further with anti-reflective coatings to reduce glare. The trade-off is fuzzy characters. Mounting the filters close to the display reduces this effect. Take care not to overheat the plastic filter by allowing for proper air flow.

Optimal filter enhancements are gained by using circular polarized, anti-reflective, band-pass filters. The circular polarizing further enhances contrast by reducing the light that travels through the filter and reflects back off the display to less than 1%.

Several filter manufacturers supply quality filter materials. Some of them are: Panelgraphic Corporation, W. Caldwell, NJ; SGL Homalite, Wilmington, DE; 3M Company, Visual Products Division, St. Paul, MN; Polaroid Corporation, Polarizer Division, Cambridge, MA; Marks Polarized Corporation, Deer Park, NY; Hoya Optics, Inc., Fremont, CA.

One last note on mounting filters: recessing displays and bezel assemblies is an inexpensive way to provide a shading effect in overhead lighting situations. Several bezel manufacturers are: R.M.F. Products, Batavia, IL; Nobex Components, Griffith Plastic Corp., Burlingame, CA; Photo Chemical Products of California, Santa Monica, CA; I.E.E.-Atlas, Van Nuys, CA.
