General Description

The 'LS563 is a high speed octal latch with buffered common Latch Enable (LE) and buffered common Output Enable (OE) inputs.

This device is functionally indentical to the 'LS573, but has inverted outputs.

Dual-In-Line Package

Features

■ Inputs and Outputs on opposite sides of packages allowing easy interface with microprocessors

■ Useful as input or output port for microprocessors

- Input clamp diodes limit high speed termination effects
- Fully TTL and CMOS compatible

Absolute Maximum Ratings (Note)

Supply Voltage	7V
Input Voltage	7V
Operating Free Air Temperature Range	
DM74LS	0°C to +70°C
Storage Temperature Range	$-65^{\circ}C$ to $+150^{\circ}C$

Note: The "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the "Electrical Characteristics" table are not guaranteed at the absolute maximum ratings. The "Recommended Operating Conditions" table will define the conditions for actual device operation.

Functional Description

The 'LS563 contains eight D-type latches with TRI-STATE output buffers. When the Latch Enable (LE) input is HIGH, data on the Dn inputs enters the latches. In this condition the latches are transparent, i.e., a latch output will change state each time its D input changes. When LE is LOW the latches store the information that was present on the D in-

puts a setup time preceding the HIGH-to-LOW transition of LE. The TRI-STATE buffers are controlled by the Output Enable (\overline{OE}) input. When \overline{OE} is LOW, the buffers are in the bi-state mode. When \overline{OE} is HIGH the buffers are in the high impedance mode but this does not interfere with entering new data into the latches.
