

E1950C

E1950C Inverter with PWM Dimming/Disable

* should be selected to be compatible with LCD and display driver

† Please Note: Values for PWM Control Voltage and Control Resistor have been selected to maintain a Minimum Source Current of 15mAdc. Any deviations to the values specified above may result in unreliable operation and/or Inverter damage. Dimming of tubes is only possible by varying the Duty cycle of the PWM signal.

Specifications and Applications Information

Preliminary

The ERG E1950C (E200II Series) dc to ac inverter is specifically designed to power the Sharp LQ10D421 LCD display module to a nominal brightness level from a +12 volt dc source.

The E1950C's small size and encapsulated package makes it the ideal power source for applications where small size, high efficiency and reliability are critical.

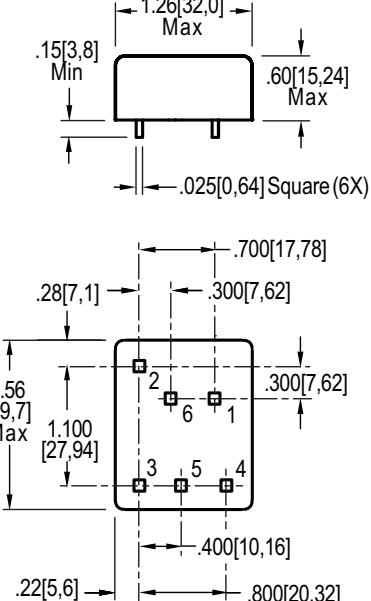

This inverter is designed to satisfy the most common cold-cathode lighting requirements for the Sharp LQ10D421 display where a PWM dimming control option is desired. Custom units, providing different inputs, outputs or package refinements are available.
