

## E2560/E2580-Type 10 Gbits/s EML Modules

### Features

- Integrated electroabsorptive modulator
- 1.5  $\mu\text{m}$  wavelength
- Characterized for 10 Gbits/s operation
- For use up to 80 km at 10 Gbits/s
- Low modulation voltage
- Temperature stabilized
- Available with and without integral driver IC
- Wavelength selectable to ITU-T standards
- Ultrastable wavelength aging for DWDM

### Applications

- SONET/SDH applications
- Ultrahigh capacity WDM system application
- High-speed data communication
- Digitized video

### Description

The E2560 EML (without integral driver IC) and E2580 EML (with integral driver IC) are designed for 10 Gbits/s DWDM or TDM transmission applications. They integrate a CW laser with an electroabsorptive modulator in the same semiconductor chip and are an extension of Lucent Technologies Microelectronics Group's existing E2500-series of devices. Both types use a small-profile Gilbert GPO connector to handle the RF signal. To ensure that sufficient optical power reaches the receiver, the devices are typically coupled with an erbium-doped fiber amplifier, such as Lucent's 1724-series. These devices can replace external modulators that are often bulkier, more expensive, and require more complex drive electronics than the EML. Both the E2560 and E2580 are available for transmission distances of 40 km and 80 km. The package also contains a thermoelectric cooler, thermistor, rear-facet monitor photodiode, and an optical isolator.

**Description** (continued)

The nominal input impedance of the E2560 version is 50 Ω. The package is qualified to the Bellcore TA-TSY-000468 standard.

Both E2560 and E2580 are available in a range of ITU-T wavelengths for use in DWDM systems operating at 10 Gbits/s per channel. The device has excellent wavelength stability, supporting operation at 100 GHz channel spacing over 20 years (assuming an end-of-life aging condition of  $\pm 100$  pm). Typically, no external wavelength stabilization is required in systems of this type, using Lucent's E2500 series EMLs. The package also offers excellent stability of wavelength vs. case temperature, with a maximum coefficient of  $\pm 0.5$  pm/°C.

## Target Specifications

### Absolute Maximum Ratings

Stresses in excess of the absolute maximum ratings can cause permanent damage to the device. These are absolute stress ratings only. Functional operation of the device is not implied at these or any other conditions in excess of those given in the operational sections of the data sheet. Exposure to absolute maximum ratings for extended periods can adversely affect device reliability.

### Laser Safety Information

Class IIIb Laser Product

This product complies with 21 CFR 1040.10 and 1040.11.

Single-mode connector

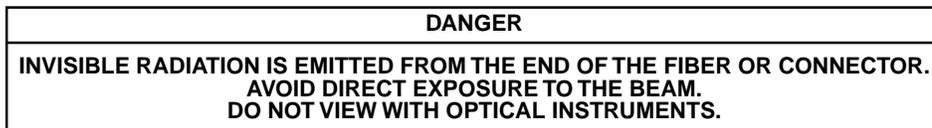

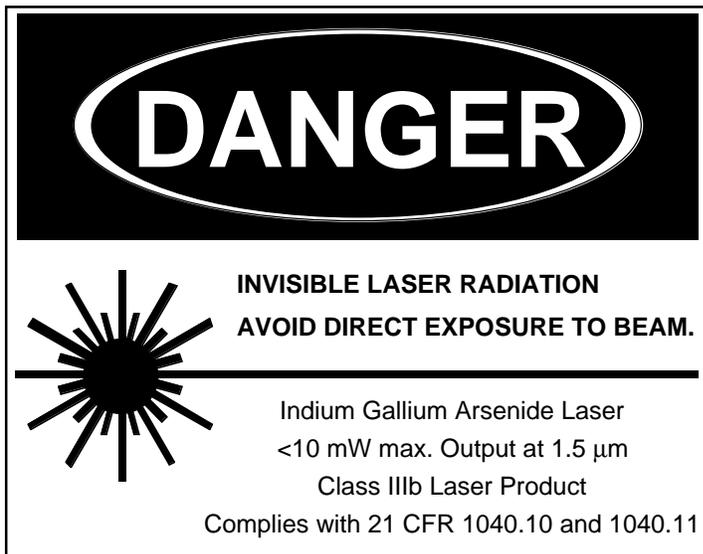

Wavelength = 1.5  $\mu\text{m}$

Maximum power = 10 mW

Because of size constraints, laser safety labeling is not affixed to the module but attached to the outside of the shipping carton.

Product is not shipped with power supply.

**Caution:** Use of controls, adjustments, and procedures other than those specified herein may result in hazardous laser radiation exposure.
