

Data Sheet August 2002 FN2902.4

# 12MHz, High Input Impedance Operational Amplifiers

HA-2600/2605 are internally compensated bipolar operational amplifiers that feature very high input impedance (500M $\Omega$ , HA-2600) coupled with wideband AC performance. The high resistance of the input stage is complemented by low offset voltage (0.5mV, HA-2600) and low bias and offset current (1nA, HA-2600) to facilitate accurate signal processing. Input offset can be reduced further by means of an external nulling potentiometer. 12MHz unity gainbandwidth, 7V/μs slew rate and 150kV/V open-loop gain enables HA-2600/2605 to perform high-gain amplification of fast, wideband signals. These dynamic characteristics, coupled with fast settling times, make these amplifiers ideally suited to pulse amplification designs as well as high frequency (e.g. video) applications. The frequency response of the amplifier can be tailored to exact design requirements by means of an external bandwidth control capacitor.

In addition to its application in pulse and video amplifier designs, HA-2600/2605 are particularly suited to other high performance designs such as high-gain low distortion audio amplifiers, high-Q and wideband active filters and high-speed comparators. For more information, please refer to Application Note AN515.

## **Ordering Information**

PART NUMBER	TEMP. RANGE (°C)	PACKAGE	PKG. NO.
HA2-2600-2	-55 to 125	8 Pin Metal Can	T8.C
HA3-2605-5	0 to 75	8 Ld PDIP	E8.3

#### Features

• Bandwidth
• High Input Impedance 500M $\Omega$
Low Input Bias Current
Low Input Offset Current
Low Input Offset Voltage 0.5mV
• High Gain
• Slew Rate 7V/µs

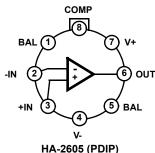

- · Output Short Circuit Protection
- · Unity Gain Stable

## **Applications**

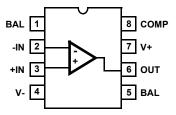

- · Video Amplifier
- · Pulse Amplifier
- · Audio Amplifiers and Filters
- · High-Q Active Filters
- · High-Speed Comparators
- · Low Distortion Oscillators

### **Absolute Maximum Ratings**

#### 

## **Operating Conditions**

Temperature Range	
HA-2600-2	 55°C to 125°C
HA-2605-5	 0°C to 75°C

#### **Thermal Information**

Thermal Resistance (Typical, Note 1)	$\theta_{JA}$ (°C/W)	$\theta_{JC}$ (oC/W)
Metal Can Package	165	80
PDIP Package	115	N/A
Maximum Junction Temperature (Hermetic I	Package)	175 <sup>0</sup> C
Maximum Junction Temperature (Plastic F	Package)	150 <sup>o</sup> C
Maximum Storage Temperature Range	65	<sup>o</sup> C to 150 <sup>o</sup> C
Maximum Lead Temperature (Soldering 1	0s)	300°C

CAUTION: Stresses above those listed in "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress only rating and operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied.

#### NOTE:

1.  $\theta_{JA}$  is measured with the component mounted on a low effective thermal conductivity test board in free air. See Tech Brief TB379 for details.

## **Electrical Specifications** $V_{SUPPLY} = \pm 15V$ , Unless Otherwise Specified

	TEMP. (°C)	HA-2600-2		HA-2605-5

#### NOTES:

- 2. Typical and minimum specifications for -9 are identical to those of -5. All maximum specifications for -9 are identical to those of -5 except for Full Temperature Bias and Offset Currents, which are 70nA Max.
- 3.  $R_1 = 2k\Omega$ .
- 4.  $V_{CM} = \pm 10V$ .
- 5. V<sub>OUT</sub> < 90mV.
- 6.  $V_{OUT} = \pm 10V$ .
- 7.  $C_L = 100pF$ .
- 8.  $V_{OUT} = \pm 200 \text{mV}$ .
- 9.  $A_V = +1$ .
- 10. See Transient Response Test Circuits and Waveforms.
- 11.  $\Delta V_S = \pm 5V$ .
- 12. This parameter value guaranteed by design calculations.
- 13. Full Power Bandwidth guaranteed by slew rate measurement: FPBW =  $\frac{\text{Slew Rate}}{2\pi V_{\text{DEAK}}}$
- 14.  $V_{OUT} = \pm 5V$
- 15. Settling time is characterized at  $A_V = -1$  to 0.1% of a 10V step.

## Test Circuits and Waveforms

NOTE: Measured on both positive and negative transitions from 0V to +200mV and 0V to -200mV at the output.

## Schematic Diagram

## Typical Applications

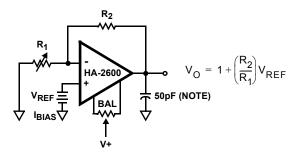

NOTE: A small load capacitance is recommended in all applications where practical to prevent possible high frequency oscillations resulting from external wiring parasitics. Capacitance up to 100pF has negligible effect on the bandwidth or slew rate.

#### NOTES:

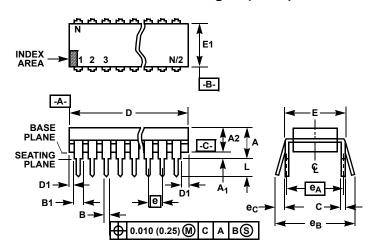

- (All leads) Øb applies between L1 and L2. Øb1 applies between L2 and 0.500 from the reference plane. Diameter is uncontrolled in L1 and beyond 0.500 from the reference plane.
- 2. Measured from maximum diameter of the product.
- 3.  $\alpha$  is the basic spacing from the centerline of the tab to terminal 1 and  $\beta$  is the basic spacing of each lead or lead position (N -1 places) from  $\alpha$ , looking at the bottom of the package.
- 4. N is the maximum number of terminal positions.
- 5. Dimensioning and tolerancing per ANSI Y14.5M 1982.
- 6. Controlling dimension: INCH.

## Dual-In-Line Plastic Packages (PDIP)

#### NOTES:

- Controlling Dimensions: INCH. In case of conflict between English and Metric dimensions, the inch dimensions control.
- 2. Dimensioning and tolerancing per ANSI Y14.5M-1982.
- 3. Symbols are defined in the "MO Series Symbol List" in Section 2.2 of Publication No. 95.
- 4. Dimensions A, A1 and L are measured with the package seated in JEDEC seating plane gauge GS-3.
- D, D1, and E1 dimensions do not include mold flash or protrusions. Mold flash or protrusions shall not exceed 0.010 inch (0.25mm).
- E and eA are measured with the leads constrained to be perpendicular to datum -C-.
- 7.  $e_B$  and  $e_C$  are measured at the lead tips with the leads unconstrained.  $e_C$  must be zero or greater.
- 8. B1 maximum dimensions do not include dambar protrusions. Dambar protrusions shall not exceed 0.010 inch (0.25mm).
- 9. N is the maximum number of terminal positions.
- Corner leads (1, N, N/2 and N/2 + 1) for E8.3, E16.3, E18.3, E28.3, E42.6 will have a B1 dimension of 0.030 - 0.045 inch (0.76 - 1.14mm).
