■ Test Method :

The specified electro-optical characteristics is satisfied under the following Conditions at the controllable distance.

① Measurement place

A place that is nothing of extreme light reflected in the room.

② External light

Project the light of ordinary white fluorescent lamps which are not high Frequency lamps and must be less than 10 Lux at the module surface.
($E_e \leq 10 \text{Lux}$)

③ Standard transmitter

A transmitter whose output is so adjusted as to **$V_o = 400 \text{mVp-p}$** and the output Wave form shown in Fig.-1. According to the measurement method shown in Fig.-2 the standard transmitter is specified.

However, the infrared photodiode to be used for the transmitter should be $\lambda_p = 940 \text{nm}$, $\Delta\lambda = 50 \text{nm}$. Also, photodiode is used of PD438B ($V_r = 5 \text{V}$).

(Standard light / Light source temperature 2856°K).

④ Measuring system

According to the measuring system shown in Fig.-3
