CMOS LSI
PLL FREQUENCY SYNTHESIZER**PRODUCT FEATURES**

- Generates All Essential Clock Signals for the Motherboards
- 4V to 7V Operating Supply Range
- Supports 8086, 80286, 80386 and 80486 Including S Series ® and Pentium™ Based Designs
- Supports ISA, VESA, and PCI Based Designs
- Supports GREEN PC Applications
- On-Chip Dual Quad Buffers
- Integrates CPU Clock and Buffered 14.318 MHz Output
- Wide Range of Selectable Output Frequencies Including 80, 66.6, 60, 50, 40, 33.3, 30, 25, 16 and 8 MHz.
- Doze Mode for Low Power Consumption
- Single, Low Cost Crystal (14.318 MHz) Used as Reference Frequency
- Smooth and Glitch-Free Switching for Programmable Clock Generator
- 50% Duty Cycle
- TTL or CMOS compatible Outputs
- Low, Short and Long Term Jitter
- 28 PDIP and 28 Pin SSOP (209 Mil Body) Package Options

BLOCK DIAGRAM**APPLICATIONS**

IMISC471 eliminates the need for multiple oscillators and generates all the essential clock signals for the Personal Computer Motherboards. Supports 8086, 80286, 80386SX, 80386DX, 80486SX, 80486DX, 80486DX2, 80486 S Series ® and Pentium™ based designs. IMISC471 can be used with Green PC, laptop or notebook computers to save power by running the system slower than normal CPU speed.

FREQUENCY TABLE

INPUTS		MCLK28 AND MCLK20 OUTPUTS (MHz)	
S2	1	DOZE# = 1	DOZE# = 0
0	0	66.6	16
0	0	80	16
0	1	60	33.3
	1	30	8
1	0	33.3	8
1	0	40	8
1	1	50	16
1	1	25	8

CONNECTION DIAGRAM

OSCin	1	28	REF14
OSCout	2	27	B2in
B1in	3	26	VSS
VSS	4	25	MCLK
B1out1	5	24	12 MHz
B1out2	6	23	B2out4
VDD	7	22	B2out3
B1out3	8	21	B2out2
B2out4	9	20	B2out1
S1	10	19	24 MHz
S0	11	18	S2
AVSS	12	17	VDD
LF1	13	16	DOZE#
AVDD	14	15	LF2

CMOS LSI
PLL FREQUENCY SYNTHESIZER**PIN DESCRIPTION**

OSCin, OSCout - These pins form an on-chip reference oscillator when connected to terminals of an external parallel resonant crystal (nominally 14.318 MHz). OSCin may also serve as an input for an externally generated reference signal.

S0, S1, and S2 - Standard frequency select inputs. These inputs control the high speed MCLK frequency selection. S0-S2 inputs control the CPU clock frequencies. All these inputs have internal pull-ups. Frequency table shows the output frequency selection conditions.

MCLK- Master clock output. Programmable output frequencies can be selected using S0-S2 inputs shown in Table 1.

DOZE# - Doze control pin. When DOZE# is high, the clock chip operates in the standard mode. When this pin goes low, output frequencies are switched to the pre-programmed DOZE frequencies. Switching to DOZE frequencies occur smoothly to allow tracking by 486 CPU internal PLL. This pin has an internal pull-up.

B1in and B2in - On-chip buffered inputs. These pins have internal pull-ups.

B1out1, B1out2, B1out3 and B1out4 - Buffered output pins of B1in. These buffers are capable to sink or source 12 ma. They can be used to buffer critical clock lines for PCI or VESA applications.

B2out1, B2out2, B2out3 and B2out4 - Buffered output pins of B2in. These buffers are capable to sink or source 12 ma. They can be used to buffer critical clock lines for PCI or VESA applications.

24 Mhz - 24 Mhz floppy drive clock output.

12 Mhz - 12 Mhz keyboard clock output.

REF1 - 14.31818 MHz output. Buffered output of on-chip reference oscillator or externally provided reference.

E1 and E2 - These are the phase detector outputs for the clock generators. They are single-ended, tri-state output for use as loop error signal. A 0.1uF capacitor to ground should be connected from this pin to form the loop filter.

VSS - Circuit Ground

VDD - Positive power supply.

AVSS - Analog circuit ground

AVDD - Analog positive power supply.

ST # - When this pin is active low, MCLK20 stops after 1.1ms. When this pin is deactive, MCLK20 starts up immediately.

November 1995

CMOS LSI
PLL FREQUENCY SYNTHESIZER**MAXIMUM RATINGS**

Input Voltage Relative to VSS:	-0.3V to 7V
Input Voltage Relative to VDD:	0.3V
Storage Temperature:	-65°C to 150°C
Ambient Temperature:	55°C to 125°C
Recommend Operating Range:	4.5 - 5.5V

This device contains circuitry to protect the inputs against damage due to high static voltages or electric field; however, precautions should be taken to avoid application of any voltage higher than the maximum rated voltages to this circuit. For proper operation, Vin and Vout should be constrained to the range:

$$VSS < (Vin \cup Vout) < VDD$$

Unused inputs must always be tied to an appropriate logic voltage level (either VSS or VDD).

ELECTRICAL CHARACTERISTICS

Characteristic	Symbol	Min	Typ	Max	Units	Conditions
Input Low Voltage	VIL	-	-	0.8	Vdc	DOZE#, S0-S2 Inputs
Input High Voltage	VIH	2.0			Vdc	DOZE#, S0-S2 Inputs
Input Low Voltage	VIL	-	-	0.8	Vdc	B1in, B2in Inputs
Input High Voltage	VIH	2.0		-	Vdc	B1in, B2in Inputs
Input Low Current with Pull-up or Pull-down	IIL	-	-	+50	µA	DOZE#, S0-S2 Inputs
Input High Current with Pull-up or Pull-down	IIH	-	-	5	µA	DOZE#, S0-S2 Inputs
Output Low Voltage IOL = 12mA	VOL	-	-	0.4	Vdc	All Outputs
Output High Voltage IOH=12mA	VOH	0.4	-	-	Vdc	All Outputs
Tri-State leakage Current	Ioz	-	-	10	µA	LF1 and LF2
Dynamic Supply Current	Icc	-	-	35	mA	VDD@ 5V, MCLK2 = 50 MHz
Short Circuit Current	ISC	25	-	-	mA	

VDD = 5 V ± 10%, TA = 0° C to + 70° C

PLL FREQUENCY SYNTHESIZER

APPLICATION SUGGESTION

NOTE 1: C3, C5, C6, C7 must be close to their pins.

NOTE 2: R10, R11, R12, R13 are close to their pins with equal traces to the probe holes. R20, R21, R22, R23 are close to their pins with equal traces to the probe holes.
