Description

The ILC803, ILC809 and ILC810 are low cost microprocessor supervisory circuits that assert a reset if the power supply drops below a designated threshold. Several different reset thresholds are available to accommodate systems operating at 3V, 3.3V or 5V.

The ILC803 has an open drain output stage with active low RESET output

The ILC809 has an active low RESET output, while the ILC810 offers an active high RESET output. The reset output is guaranteed to remain asserted for a minimum of 140ms after V_{CC} has risen above the designated reset threshold. The ILC803, ILC809 and ILC810 are available in either a 3-Pin SOT-23 package or a 3-Pin SC70 packages.

Circuit Description

Microprocessor Reset

The \overline{RESET} pin is asserted whenever V_{CC} falls below the reset threshold voltage. The reset pin remains asserted for a period of 240ms after V_{CC} has risen above the reset threshold voltage. The reset function ensures the microprocessor is properly reset and powers up into a known condition after a power failure. \overline{RESET} will remain valid with V_{CC} as low as 1.4V.

VCC Transients

The ILC803, ILC809 and ILC810 are relatively immune to negative-going V_{CC} glitches below the reset threshold. Typically, a negative-going transient 125mV below the reset threshold with a duration of 50ms (25ms for ILC8_R/S/T) or less will not cause an unwanted reset.

Interfacing to Bi-directional Reset Pins

The ILC803/ILC809/ILC810 can interface with mPs with bi-directional reset pins by connecting a $4.7k\Omega$ resistor in series with the ILC803/ILC809/ILC810 output and the mP reset pin. ILC803 connects directly with a single pull-up resistor (figure 2).

RESET Valid to 0V

A resistor can be added from the \overline{RESET} pin to ground to ensure the \overline{RESET} output remains low with V_{CC} down to 0V. A $100k\Omega$ resistor connected from \overline{RESET} to ground is recommended. The size of the resistor should be large enough to not load the \overline{RESET} output and small enough to pull-down any stray leakage currents.
