ICS87946I

LOW SKEW, ÷1, ÷2 LVCMOS CLOCK GENERATOR

GENERAL DESCRIPTION

The ICS87946I is a low skew, ÷1, ÷2 LVCMOS Clock Generator and a member of the HiPerClockS™ family of High Performance Clock Solutions from ICS. The ICS87946I has two selectable single ended clock inputs. The single ended clock inputs accept LVCMOS or LVTTL input levels. The low impedance LVCMOS outputs are designed to drive 50Ω series or parallel terminated transmission lines. The effective fanout can be increased from 10 to 20 by utilizing the ability of the outputs to drive two series terminated lines.

The divide select inputs, DIV_SELx, control the output frequency of each bank. The outputs can be utilized in the ÷1, ÷2 or a combination of ÷1 and ÷2 modes. The master reset input, MR/nOE, resets the internal frequency dividers and also controls the active and high impedance states of all outputs.

The ICS87946I is characterized at 3.3V core/3.3V output. Guaranteed output and part-to-part skew characteristics make the ICS87946I ideal for those clock distribution applications demanding well defined performance and repeatability.
