Product Summary

Part Number	Radiation Level	R _{d(on)}	I _D	QPL Part Number
IRHY9130CM	100K Rads (Si)	0.30Ω	-11A	JANSR2N7382
IRHY93130CM	300K Rads (Si)	0.30Ω	-11A	JANSF2N7382

International Rectifier's RADHard HEXFET[®] technology provides high performance power MOSFETs for space applications. This technology has over a decade of proven performance and reliability in satellite applications. These devices have been characterized for both Total Dose and Single Event Effects (SEE). The combination of low Rdson and low gate charge reduces the power losses in switching applications such as DC to DC converters and motor control. These devices retain all of the well established advantages of MOSFETs such as voltage control, fast switching, ease of paralleling and temperature stability of electrical parameters.

TO-257AA

Features:

- Single Event Effect (SEE) Hardened
- Low R_{d(on)}
- Low Total Gate Charge
- Proton Tolerant
- Simple Drive Requirements
- Ease of Parallelizing
- Hermetically Sealed
- Light Weight

Radiation Characteristics

IRHY9130CM, JANSR2N7382

International Rectifier Radiation Hardened MOSFETs are tested to verify their radiation hardness capability. The hardness assurance program at International Rectifier is comprised of two radiation environments. Every manufacturing lot is tested for total ionizing dose (per notes 5 and 6) using the TO-3 package. Both pre- and post-irradiation performance are tested and specified using the same drive circuitry and test conditions in order to provide a direct comparison.
