KMMR18R84(6/8/C/G)C1 4/6/8/12/16d RIMM™ Module with 144Mb RDRAMs

Overview

The Rambus® RIMM™ module is a general purpose high-performance memory subsystem suitable for use in a broad range of applications including computer memory, personal computers, workstations, and other applications where high bandwidth and low latency are required.

The Rambus RIMM module consists of 128Mb/144Mb Direct Rambus DRAM devices. These are extremely high-speed CMOS DRAMs organized as 8M words by 16 or 18 bits. The use of Rambus Signaling Level (RSL) technology permits 600MHz or 800MHz transfer rates while using conventional system and board design technologies. RDRAM devices are capable of sustained data transfers at 1.25 ns per two bytes (10ns per 16 bytes).

The RDRAM architecture enables the highest sustained bandwidth for multiple, simultaneous, randomly addressed, memory transactions. The separate control and data buses with independent row and column control yield over 95% bus efficiency. The RDRAM's 32-banks architecture supports up to four simultaneous transactions per device.

Features

- ◆ High speed 800 and 600MHz RDRAM storage
- ◆ 184 edge connector pads with 1mm pad spacing
- ◆ Maximum module PCB size : 133.5mm x 31.75mm x 1.37mm (5.21" x 1.25" x 0.05")
- ◆ Each RDRAM has 32 banks, for a total of 512, 384, 256, 192, or 128 banks on each 256/288MB, 192/216MB, 128/144MB, 96/108MB, or 64/72MB module respectively
- ◆ Gold plated edge connector pad contacts
- ◆ Serial Presence Detect (SPD) support
- ◆ Operates from a 2.5 volt supply (±5%)
- ◆ Low power and powerdown self refresh modes
- ◆ Separate Row and Column buses for higher efficiency
- ◆ RDRAMs use µ-BGA package type

Key Timing Parameters/Part Numbers

The following table lists the frequency and latency bins available from RIMM modules. An optional 'S' designator instead of 'R' followed by 'hyphen(-)' indicates low power modules.

a. -S designator is used for modules with lower self-refresh current.

Form Factor

The Rambus RIMM modules are offered in a 184-pad 1mm edge connector pad pitch form factor suitable for 184 contact RIMM connectors. The RIMM module is suitable for desktop and other system applications.

Note: On two sided modules, RDRAMs are also installed on bottom side of PCB.
