Description

The LBB110 is a Dual 1 Form B solid state relay that has two independently controlled optically coupled MOSFETs. The efficient MOSFET switches and photovoltaic die use Clare's patented OptoMOS® architecture to provide 3750 V_{RMS} of input to output isolation. The optically coupled inputs are controlled by highly efficient GaAlAs infrared LEDs. Dual pole OptoMOS relays provide a more compact design solution than discrete single pole relay in a variety of applications. The dual pole relays save board space by incorporating both relays in a single 8-pin package.

Absolute Maximum Ratings are stress ratings. Stresses in excess of these ratings can cause permanent damage to the device. Functional operation of the device at these or any other conditions beyond those indicated in the operational sections of this data sheet is not implied. Exposure of the device to the absolute maximum ratings for an extended period may degrade the device and effect its reliability.
