

LMV321 SINGLE, LMV358 DUAL, LMV324 QUAD, LMV324S QUAD WITH SHUTDOWN LOW-VOLTAGE RAIL-TO-RAIL OUTPUT OPERATIONAL AMPLIFIERS

SLOS263J – AUGUST 1999 – REVISED MAY 2003

- 2.7-V and 5-V Performance
- Low-Power Shutdown Mode (LMV324S)
- No Crossover Distortion
- Low Supply Current:
 - LMV321 . . . 130 μ A Typ
 - LMV358 . . . 210 μ A Typ
 - LMV324 . . . 410 μ A Typ
 - LMV324S . . . 410 μ A Typ
- Rail-to-Rail Output Swing
- ESD Protection Exceeds JESD 22
 - 2000-V Human-Body Model (A114-A)
 - 1000-V Charged-Device Model (C101)

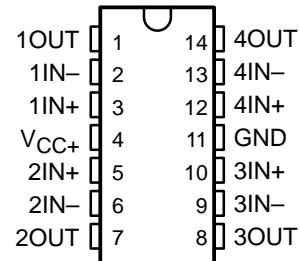

description/ordering information

The LMOV321, LMOV358, and LMOV324/LMOV324S are single, dual, and quad low-voltage (2.7 V to 5.5 V), operational amplifiers with rail-to-rail output swing. The LMOV324S is a variation of the standard LMOV324 that includes a power-saving shutdown feature that reduces supply current to a maximum of 5 μ A per channel when the amplifiers are not needed.

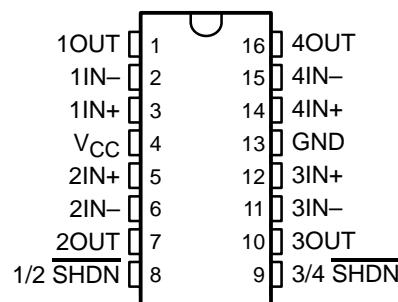

The LMOV321, LMOV358, LMOV324, and LMOV324S are the most cost-effective solutions for applications where low-voltage operation, space saving, and low price are needed. These amplifiers were designed specifically for low-voltage (2.7 V to 5 V) operation, with performance specifications meeting or exceeding the venerable LM358 and LM324 devices that operate from 5 V to 30 V. Additional features of the LMOV3xx devices are a common-mode input voltage range that includes ground, 1-MHz unity-gain bandwidth, and 1-V/ μ s slew rate.

The LMOV321 is available in the ultra-small DCK (SC-70) package, which is approximately one-half the size of the DBV (SOT-23) package. This package saves space on printed circuit boards and enables the design of small portable electronic devices. It also allows the designer to place the device closer to the signal source to reduce noise pickup and increase signal integrity.

LMV321 SINGLE, LMV358 DUAL, LMV324 QUAD, LMV324S QUAD WITH SHUTDOWN LOW-VOLTAGE RAIL-TO-RAIL OUTPUT OPERATIONAL AMPLIFIERS

SLOS263J – AUGUST 1999 – REVISED MAY 2003

absolute maximum ratings over operating free-air temperature range (unless otherwise noted)[†]

Supply voltage, V_{CC} (see Note 1)	5.5 V
Differential input voltage, V_{ID} (see Note 2)	± 5.5 V
Input voltage, V_I (either input)	0 to 5.5 V
Duration of output short circuit (one amplifier) to ground at (or below) $T_A = 25^\circ\text{C}$, $V_{CC} \leq 5.5$ V (see Note 3)	Unlimited
Package thermal impedance, θ_{JA} (see Notes 4 and 5): D (8-pin) package	97°C/W
D (14-pin) package	86°C/W
D (16-pin) package	73°C/W
DBV package	206°C/W
DCK package	252°C/W
DGK package	172°C/W
PW (8-pin) package	149°C/W
PW (14-pin) package	113°C/W
PW (16-pin) package	108°C/W
Operating virtual junction temperature, T_J	150°C
Storage temperature range, T_{stg}	-65 to 150°C

[†] Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

- NOTES: 1. All voltage values (except differential voltages and V_{CC} specified for the measurement of I_{OS}) are with respect to the network GND.
2. Differential voltages are at IN+ with respect to IN-.
3. Short circuits from outputs to V_{CC} can cause excessive heating and eventual destruction.
4. Maximum power dissipation is a function of $T_J(\text{max})$, θ_{JA} , and T_A . The maximum allowable power dissipation at any allowable ambient temperature is $P_D = (T_J(\text{max}) - T_A)/\theta_{JA}$. Selecting the maximum of 150°C can affect reliability.
5. The package thermal impedance is calculated in accordance with JESD 51-7.

recommended operating conditions (see Note 6)

		MIN	MAX	UNIT
V_{CC}	Supply voltage (single-supply operation)	2.7	5.5	V
V_{IH}	Amplifier turn-on voltage level (LMV324S) [‡]	$V_{CC} = 2.7$ V	1.7	V
		$V_{CC} = 5$ V	3.5	
V_{IL}	Amplifier turn-off voltage level (LMV324S)	$V_{CC} = 2.7$ V	0.7	V
		$V_{CC} = 5$ V	1.5	
T_A	Operating free-air temperature	-40	85	°C

[‡] V_{IH} should not be allowed to exceed V_{CC} .

NOTE 6: All unused control inputs of the device must be held at V_{CC} or GND to ensure proper device operation. Refer to the TI application report, *Implications of Slow or Floating CMOS Inputs*, literature number SCBA004.
