FEATURES

- UNIDIRECTIONAL FUNCTION
- PROGRAMMABLE BREAKDOWN VOLTAGE
UP TO 265 V
- PROGRAMMABLE CURRENT LIMITATION
FROM 50 mA TO 550 mA
- HIGH SURGE CURRENT CAPABILITY
 $I_{PP} = 100A \quad 10/1000\mu s$

DESCRIPTION

Dedicated to sensitive telecom equipment protection, this device can provide both voltage protection and current limitation with a very tight tolerance.

Its high surge current capability makes the L3100B a reliable protection device for very exposed equipment, or when series resistors are very low. The breakdown voltage can be easily programmed by using an external zener diode.

A multiple protection mode can also be performed when using several zener diodes, providing each line interface with an optimized protection level.

The current limiting function is achieved with the use of a resistor between the gate N and the cathode. The value of the resistor will determine the level of the desired current.

REFERENCE TEST CIRCUIT FOR I_{BO} and V_{BO} parameters:

TEST PROCEDURE :

- Pulse Test duration ($t_p = 20ms$):
 - For Bidirectional devices = Switch K is closed
 - For Unidirectional devices = Switch K is open.
- V_{OUT} Selection
 - Device with $V_{BO} < 200$ Volt
 - $V_{OUT} = 250 V_{RMS}$, $R_1 = 140 \Omega$.
 - Device with $V_{BO} \geq 200$ Volt
 - $V_{OUT} = 480 V_{RMS}$, $R_2 = 240 \Omega$.

FUNCTIONAL HOLDING CURRENT (I_H) TEST CIRCUIT = GO - NOGO TEST.

This is a GO-NOGO Test which allows to confirm the holding current (I_H) level in a functional test circuit.

This test can be performed if the reference test circuit can't be implemented.

TEST PROCEDURE :

- 1) Adjust the current level at the I_H value by short circuiting the AK of the D.U.T.
- 2) Fire the D.U.T with a surge Current : $I_{pp} = 10A$, $10/1000 \mu s$.
- 3) The D.U.T will come back to the OFF-State within a duration of 50 ms max.
