# NC7SZ66

# TinyLogic® Low Voltage UHS Single SPST Normally Open Bus Switch

## **General Description**

The NC7SZ66 is a ultra high-speed (UHS) CMOS compatible single-pole/single-throw (SPST) bus switch. The LOW On Resistance of the switch allows inputs to be connected to outputs with minimal propagation delay and without generating additional ground bounce noise. The device is organized as a 1-bit switch with a switch enable (OE) signal. When OE is HIGH, the switch is on and Port A is connected to Port B. When OE is LOW, the switch is open and a high-impedance state exists between the two ports.

#### **Features**

- Space saving SOT23 or SC70 5-lead package
- Ultra small MicroPak™ leadless package
- Broad V<sub>CC</sub> Operating Range 1.65V–5.5V
- Rail-to-rail signal handling
- $\blacksquare$   $5\Omega$  switch connection between two ports
- Minimal propagation delay through the switch
- Low I<sub>CC</sub>
- Zero bounce in flow-through mode
- Control input compatible with CMOS input levels

## **Ordering Code:**

| Order<br>Number |        |      | Package Description                   | Supplied As               |  |
|-----------------|--------|------|---------------------------------------|---------------------------|--|
| NC7SZ66M5X      | MA05B  | 7Z66 | 5-Lead SOT23, JEDEC MO-178, 1.6mm     | 3k Units on Tape and Reel |  |
| NC7SZ66P5X      | MAA05A | Z66  | 5-Lead SC70, EIAJ SC-88a, 1.25mm Wide | 3k Units on Tape and Reel |  |
| NC7SZ66L6X      | MAC06  | EE   | 6-Lead MicroPak, 1.0mm Wide           | 5k Units on Tape and Reel |  |

Note 1: The "Absolute Maximum Ratings" are those values beyond which the safety of the device cannot be guaranteed. The device should not be operated at these limits. The parametric values defined in the Electrical Characteristics tables are not guaranteed at the absolute maximum ratings. The "Recommended Operating Conditions" table will define the conditions for actual device operation.

**Note 2:** The input and output negative voltage ratings may be exceeded if the input and output diode current ratings are observed.

Note 3: Unused inputs must be held HIGH or LOW. They may not float.

| I <sub>CC</sub>   | Quiescent Supply Current         | 1.65 to 5.5     |                                 | 0.05            | 10                   |     |     |     | μА    | $V_{IN} = V_{CC}$ or GND<br>$I_{OUT} = 0$         |

Note 4: Measured by the voltage drop between A and B pins at the indicated current through the switch. On Resistance is determined by the lower of the voltages on the two (A or B) pins.

Note 5: All typical values are at the specified  $V_{CC},$  and  $T_A=25^{\circ}C.$ 

Note 6: Parameter is characterized but not tested in production.

Note 7: Flatness is defined as the difference between the maximum and minimum value of On Resistance over the specified range of conditions.

|                                     |                              | 4.5-5.5         | 1.5  | 2.7                     | 5.0  | ns      | 1  |              |

Note 8: All typical values are at the specified  $V_{CC}$ , and  $T_A = 25 ^{\circ} C$ .

Note 9: This parameter is guaranteed by design but is not tested. The switch contributes no propagation delay other than the RC delay of the typical On Resistance of the switch and the 50 pF load capacitance, when driven by an ideal voltage source (zero output impedance).

# Capacitance

| Symbol           | Parameter                     | Тур | Max | Units | Conditions             |
|------------------|-------------------------------|-----|-----|-------|------------------------|
| C <sub>IN</sub>  | Control Pin Input Capacitance | 2   |     | pF    | $V_{CC} = 0V$          |
| C <sub>I/O</sub> | Input/Output Capacitance      | 6   |     | pF    | V <sub>CC</sub> = 5.0V |

# AC Loading and Waveforms

Input driven by  $50\Omega$  source terminated in  $50\Omega$   $C_L$  includes load and stray capacitance.

Input PRR = 1.0 MHz;  $t_w$  = 500 ns

#### LIFE SUPPORT POLICY

FAIRCHILD'S PRODUCTS ARE NOT AUTHORIZED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF THE PRESIDENT OF FAIRCHILD SEMICONDUCTOR CORPORATION. As used herein:

- Life support devices or systems are devices or systems which, (a) are intended for surgical implant into the body, or (b) support or sustain life, and (c) whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user.
- A critical component in any component of a life support device or system whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.
