OPLINK wavelength division Add and Drop multiplexer (OADM) is based on thin-film filter technology and metal bonding micro optics packaging. This module offers narrow channel bandwidth, flexible channel configuration, low insertion loss and high isolation. The OADM-12B module is used to add and drop two particular wavelengths and is ideal for telecommunications and network. All OPLINK products are epoxy-free in the optical path. It is used in high-power applications in DWDM systems. OPLINK OADM devices are Bellcore GR -1221 qualification tested.
