

Ratiometric Linear Hall Effect Sensor

Types OHN3150U, OHN3151U, OHS3150U, OHS3151U

Features

- A ratiometric linear output capable of sinking and sourcing current
- 4.5 V to 6.0 V operation
- Responds equally to positive and negative magnetic field
- Excellent temperature stability to operate in harsh environments
- Robust package capable of withstanding harsh environments

Description

The ratiometric linear Hall Effect sensor each contain a monolithic integrated circuit on a single chip. The circuit incorporates a quadratic Hall sensing element which minimizes the effects of mechanical and thermal stress on the Hall element and temperature compensating circuitry to compensate for the inherent Hall element sensitivity change over temperature current.

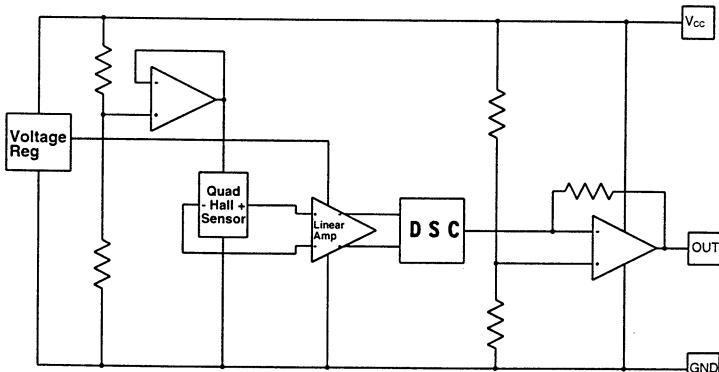

These ratiometric linear Hall Effect sensors provide an output voltage that varies in proportion to the applied magnetic field. The voltage output will increase in response to a south pole (positive) magnetic field applied perpendicular to the package symbolization face, and decrease in response to a north pole (negative) magnetic field.

These 3150U & 3151U ratiometric linear Hall Effect sensors can be used as contactless sensors for rotary and linear position sensing and for current sensing. The devices in this series are similar in performance except for their allowable quiescent voltage output change over the specified operating temperature range.

Absolute Maximum Ratings

Supply Voltage, Vcc	6 V
Storage Temperature Range, Ts	-65° C to +170° C
Operating Temperature Range, TA (OHS prefix)	-40° C to +150° C
(OHN prefix)	-20° C to +85° C
Lead Soldering Temperature (1/8 inch [3.2 mm] from case for 5 sec, with soldering iron)	260° C ⁽¹⁾
Power Dissipation, PD	100 mW
Output Current, Io	5 mA
Magnetic Flux Density, B	Unlimited
