Product Description:

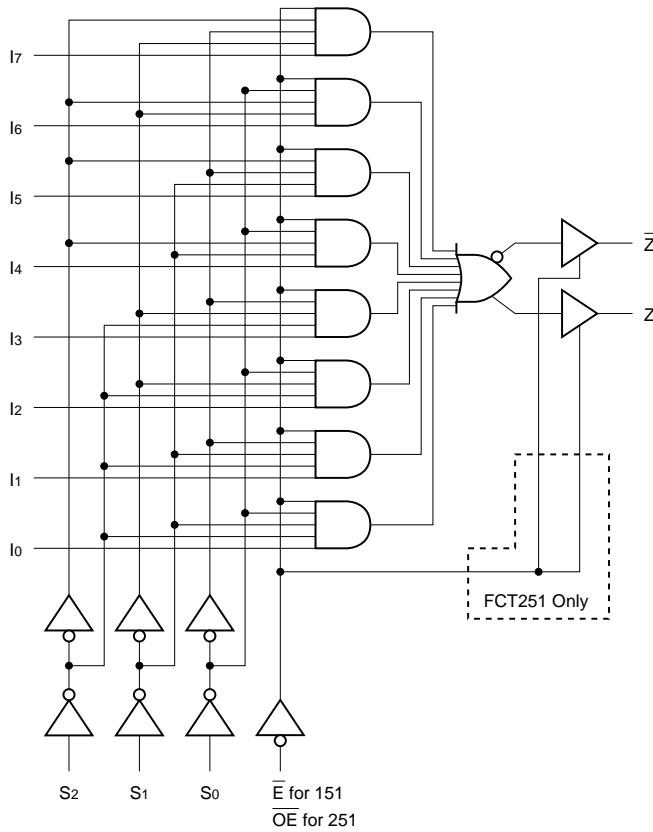

Pericom Semiconductor's PI74FCT series of logic circuits are produced in the Company's advanced 0.8 micron CMOS technology, achieving industry leading speed grades.

The PI74FCT151T, PI74FCT251T, and PI74FCT2151T are high-speed 8-input multiplexers. They select one bit from a source of eight under the control of three select inputs. Both assertion and negation outputs are provided.

The PI74FCT151/2151T has a common active-LOW, Enable input (\bar{E}). When \bar{E} is LOW, data from one of eight inputs is directed to the complementary outputs based on the 3-bit code applied to the Select (S_0-S_2) inputs. The PI74FCT151/2151T can be used as a data routing device from one of eight sources.

The PI74FCT251T has a common Active-LOW Output Enable (\bar{OE}) input. When \bar{OE} is LOW, data from one of eight inputs is directed to the complementary outputs. When \bar{OE} is HIGH, both outputs are switched to a high-impedance state allowing multiplexer expansion by tying several outputs together.
