Description

PI3A4627 is a single-pole/single-throw (SPST) normally closed (NC) analog switch that operates from a single +1.5V to +3.6V supply.

The switch has 0.4Ω Max On-Resistance (R_{ON}), with 0.1Ω Max R_{ON} flatness over the analog signal range when powered from a +3.0V supply. Leakage currents are less than 2nA and fast switching times are less than 10ns.

To minimize PC board area use, the device is available in the ultra compact TDFN, and the small compact SOT-23 packages.

Notes:

1. The algebraic convention, where most negative value is a minimum and most positive is a maximum, is used in this data sheet.
2. Typical values are for DESIGN AID ONLY, not guaranteed or subject to production testing.
3. Guaranteed by design.
4. ΔR_{ON} = R_{ON} Max. - R_{ON} Min.
5. Flatness is defined as the difference between the maximum and minimum value of On-Resistance measured.
6. Leakage parameters are 100% tested at maximum rated hot temperature and guaranteed by correlation at +25°C.
7. Off Isolation = 20log₁₀ [V_{COM} / (V_{NO} or V_{NC})]. See Figure 3.
