Product Description

Pericom's PI5C32202 is a 32-bit bus switch. Industry leading advantages include very low power, and low I/O capacitance. When the bus switch is enabled ($\overline{EN}_x = 0$), it is terminated internally through a series resistor to an external VBIAS. The ON-resistance of the switch along with the series resistor provides a 100 Ω nominal termination to VBIAS.

Applications

Provides GTL termination for busses for three to four processor Pentium II system with an empty Slot II.

$\overline{EN}_X$	Switch	Notes:
L	On	When Enabled: Ports Ax connect to VBIAS..A Ports Ay connect to VBIAS..B
H	Off	Where: X = 0-3, 8-11, 16-19, 24-27 Y = 4-7, 12-15, 20-23, 28-31

Maximum Ratings

(Above which the useful life may be impaired. For user guidelines, not tested).

Storage Temperature	-65°C to +150°C
Ambient Temperature with Power Applied	-40°C to +85°C
Supply Voltage to Ground Potentials (Inputs & V _{CC} Only)	-0.5V to +7.0V
DC Input Voltage	-0.5V to +7.0V

Note:

Stresses greater than those listed under MAXIMUM RATINGS may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any conditions above those indicated in the operational sections of this specification is not implied. Exposure to absolute maximum rating conditions for extended periods of time may affect reliability.
