### Description

The PI49FCT3807D is a 3.3V compatible, high-speed, low-noise 1-10 non-inverting clock buffer. The key goal in designing the PI6C3807D is to target networking applications that require low-skew, low-jitter, and high-frequency clock distribution. Providing output-to-output skew as low as 150ps, the PI49FCT3807D is an ideal clock distribution device for synchronous systems. Designing synchronous networking systems requires a tight level of skew from a large number of outputs.
