

Low-Noise Phase-Locked Loop Clock Driver with 9 Clock Outputs

Product Features

- Operating Frequency up to 150 MHz
- Low-Noise Phase-Locked Loop Clock Distribution to meet 133 MHz Registered DIMM Synchronous DRAM module specifications for server/workstation/PC applications
- Allows Clock Input to have Spread Spectrum modulation for EMI reduction
- Zero input-to-output delay: Distribute One Clock Input to one bank of five and one bank of four outputs, with separate output enables
- Low jitter: cycle-to-cycle jitter ±75ps max.
- 30-ohm on-chip series damping resistor at clock output drivers for low noise and EMI reduction
- Operates at 3.3V V_{CC}
- · Package:

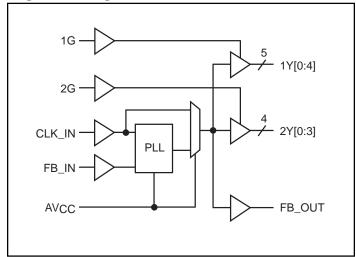

Plastic 24-pin TSSOP(L)

Product Description

The PI6C2509-133 is a "quiet," low-skew, low-jitter, phase-locked loop (PLL) clock driver, distributing low-noise clock signals for SDRAM and server applications. By connecting the feedback FB_OUT output to the feedback FB_IN input, the propagation delay from the CLK_IN input to any clock output will be nearly zero. This zero-delay feature allows the CLK_IN input clock to be distributed, providing 5 clocks for the first bank, and an additional 4 clocks for the second bank.

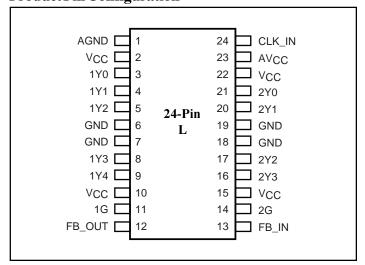

This clock driver is designed to meet the PC133 SDRAM Registered DIMM specification. For test purposes, the PLL can be bypassed by strapping AV_{CC} to ground.

Pin Functions

i iii i uncuo	1	i	
Pin Name	Pin No.	Type	Description
CLK_IN	24	I	Clock input. CLK_IN allows spread spectrum.
FB_IN	13	I	Feedback input. FB_IN provides the feedback signal to the internal PLL.
1G	11	I	Output bank enable. When 1G is LOW, outputs 1Y[0:4] are disabled to a logic low state. When 1G is HIGH, all outputs 1Y[0:4] are enabled.
2G	14	I	Output bank enable. When 2G is LOW, outputs 2Y[0:3] are disabled to a logic low state. When 2G is HIGH, all outputs 2Y[0:3] are enabled.
FB_OUT	12	О	Feedback output. FB_OUT is dedicated for external feedback. FB_OUT has an embedded series-damping resistor of the same value as the clock outputs 1Yx, 2Yx.
1Y[0:4]	3,4,5,8,9	О	Clock outputs. These outputs provide low-skew copies of CLK_IN. Each output has an embedded series-damping resistor.
2Y[3:0]	16,17, 20, 21	О	Clock outputs. These outputs provide low-skew copies of CLK_IN. Each output has an embedded series-damping resistor.
AV_{CC}	23	Power	Analog power supply. AV_{CC} can be also used to bypass the PLL for test purposes. When AV_{CC} is strapped to ground, PLL is bypassed and CLK_IN. is buffered directly to the device outputs.
AGND	1	Ground	Analog ground. AGND provides the ground reference for the analog circuitry.
V _{CC}	2,10,15,22	Power	Power supply.
GND	6,7,18,19	Ground	Ground.
