

PCIR101 - PCIR102

SIGNAL CONDITIONER WITH VOLTAGE (101), CURRENT 4...20mA (102) OUTPUT FOR DISPLACEMENT TRANSDUCERS

Main features

- Interface module integrated in the connector
- Standard output 0...10Vdc (PCIR 101)
- Standard output 4...20mA (PCIR 102)
- High linearity
- Low zero and span thermal drift
- Adjustable Zero and Span

The signal conditioner with 0...10Vdc (PCIR101) or 4...20mA (PCIR102) output for displacement transducers are manufactured with a single SMD circuit with high stability electronics components that grant a very good linearity and thermal stability. The circuit is integrated in a 4-pole connector, with the possibility to adjust the trimmers of zero and span. It is possible to rotate the internal part of the connector by 90° steps, allowing the installation of the conditioner on the transducer in four different directions.
