

Industrial automatic instrument series :**3. Pressure gauges.....**

Pressure gauge consists of 3 parts as measuring system (including probe, spring tube and transmission mechanism); display parts (including pointer and dial plate) and enclosures (including outside shell, cover ring and glass). Additional, the perfect seal performance ensures the gauge to be free from dusts.

Spring tube pressure gauge applies to the environment where the medium should not crystallize and concrete and also is not corrosive to copper alloy (lead - brass alloy and tin-bronze alloy) and tin-lead alloy. The applicable ambient temperature is within $-40+70^{\circ}\text{C}$ and the relative humidity should be less than 90% .

Pressure gauges

Tpye

Product name	Model	Measuring range (MPa)	Precision grade
Pressure thermometers	General pressure gauges	Various measuring range can be made according to customers' requirements	Precision grade of pressure gauge is up to 1.5 or 2.5 degree.
	Vacuum gauges		
	Oxygen pressure gauges
