

RX77R1A

2.5 Gbps Fiber Optic Receiver with Clock Recovery and Retiming

These RX77R1A 2.5 Gbps fiber optic receivers are designed for use in telecommunication and high-speed data communication applications. The receivers operate at SONET OC-48 and SDH STM-16 data rate. The receivers convert received optical signals in the range of 1200 nm to 1600 nm wavelength into single-ended data and differential clock outputs. The receivers consist of either InGaAs APD or PIN photodiode, a GaAs transimpedance amplifier, and a clock and data recovery (CDR) IC.
