The S-4630A is a CMOS thermal print head driver containing a 64-bit shift register and a latch. It can be easily used for general purpose because "H" or "L" can be selected for the driver enable and the latch is fixed to "L". It is ideal for the thermal print head of 200 dpi or 8 dots/mm because of its driver output pad pitch of 110 μm .

■ Features

- Low current consumption : 0.4 mA typ.
($f_{\text{CLK}}=5$ MHz, SI : fixed)
- High speed operation : 7 MHz (chip)
5 MHz (cascade connection)
- Driver output voltage : 36 V max.
- Driver output current : 9 mA max.
- 64-bit shift register and latch are built in
- Driver enable
- Driver-off function when supply voltage falls

■ Block Diagram

Figure 1

64-bit THERMAL HEAD DRIVER S-4630A

■ Operation

The 64-bit shift register reads the data input to SI on the rising edge of the CLOCK input.

The latch circuit reads the data of the shift register when it is "L" level, and it holds the preceding data when it is "H" level.

The latch data are output to the respective drivers when $\overline{\text{AEN}}$ is low and $\overline{\text{BEN}}$ is high. The driver output transistor turns on when the latch data are high and turns off when low. Turning $\overline{\text{AEN}}$ high or $\overline{\text{BEN}}$ low makes all driver output transistors go off.

All driver output transistors go off when power supply voltage becomes lower than V_{DET} regardless of all input signals.

■ Terminal Functions (Refer to the dimensions for the pad arrangement)

Table 1

No.	Name	Functions
1 to 64	DO ₁ to DO ₆₄ (DO _n)	Driver output terminals (Nch open-drain)
65, 66, 71, 72, 79, 80	V _{SS1}	GND for driver (0 V)
68, 75	V _{DD}	Positive power supply for logic (+5 V)
70, 73	V _{SS0}	GND for logic (0 V)
76	CLK	Clock input terminal for 64-bit shift register
78	SI	Serial data input terminal for 64-bit shift register
67	SO	Serial data output terminal for 64-bit shift register
77	$\overline{\text{LATCH}}$	Data latch signal input terminal $\overline{\text{LATCH}} = \text{"L"} : \text{reads the data of the shift register}$ $\overline{\text{LATCH}} = \text{"H"} : \text{holds the preceding data}$
74	$\overline{\text{AEN}}$	Driver enable terminal : outputs the latch data to the driver when low (pull-up resistor is built in)
69	$\overline{\text{BEN}}$	Driver enable terminal : outputs the latch data to the driver when high (pull-down resistor is built in)
