**LINEAR IMAGE SENSOR IC FOR CONTACT IMAGE SENSOR****S-8603AWI**

The S-8603AWI is a suitable linear image sensor for a multichip-type contact image sensor with a resolution of 8 dots per mm. This IC integrates a 64dots photo-transistor array and a CMOS scanning circuit. Picture signals are output one after another in analog signals, synchronized with a clock signal.

### ■ Features

- Adjustable scanning length for various sizes of paper : 8mm.  
 ...Various sizes of paper can be read by simply changing the number of chips aligned in a line.
- 2-input signals : SI, CLK.  
 ...Only these two input signals, start and clock, make the scanning easily.
- High sensitivity : High sensitive photo transistor.
- Low current consumption : 5V single power supply and CMOS scanning circuit.
