Description

The SLR-50HL series consists of an NPN silicon planar photodarlington transistor mounted in a hermetically sealed TO-18 dome lens package. The first stage base lead is connected to provide switching control and circuitry biasing if needed. This series of photodarlington devices is ideal in low irradiance applications where higher gain is needed. The hermetic package provides high reliability in hostile environments. The various sensitivity ranges available provide the desired output to meet multiple application demands.
