### DESCRIPTION

The SFH67xx high speed optocoupler series consists of a GaAlAs infrared emitting diode, optically coupled with an integrated photodetector. The detector incorporates a Schmitt-Trigger stage for improved noise immunity. Using the Enable input, the output can be switched to the high ohmic state, which is necessary for data bus applications. A Faraday shield provides a common mode transient immunity of 1000 V/μs at V<sub>CM</sub>=50 V for SFH6700/01/02/05 and 2500 V/μs at V<sub>CM</sub>=400 V for SFH6711/12/19.

The SFH67xx uses an industry standard DIP8 package. With standard lead bending, creepage distance and clearance of ≥7.0 mm with lead bending options 6, 7, and 9 ≥8 mm are achieved.
