TC74VCX2125FT

LOW-VOLTAGE QUAD BUS BUFFER WITH 3.6 V TOLERANT INPUTS AND OUTPUTS

The TC74VCX2125FT is a high performance CMOS QUAD BUS BUFFER. Designed for use in 1.8, 2.5 or 3.3 Volt systems, it achieves high speed operation while maintaining the CMOS low power dissipation. It is also designed with over voltage tolerant inputs and outputs up to 3.6V. This device requires the 3-state control input \overline{OE} to be set high to place the output into the high impedance state. The 26- Ω series resistor helps reducing output overshoot and undershoot without external resistor. All inputs are equipped with protection circuits against static discharge.
