

**TC74HC109AP, TC74HC109AF, TC74HC109AFN****DUAL J -  $\bar{K}$  FLIP - FLOP WITH PRESET AND CLEAR**

The TC74HC109A is a high speed CMOS J -  $\bar{K}$  FLIP FLOP fabricated with silicon gate C<sup>2</sup>MOS technology.

It achieves the high speed operation similar to equivalent LSTTL while maintaining the CMOS low power dissipation.

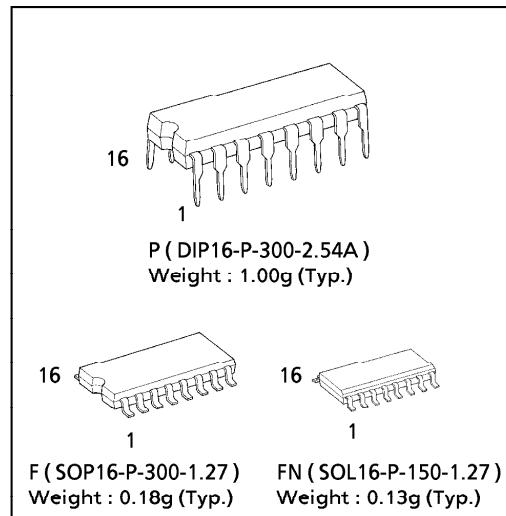

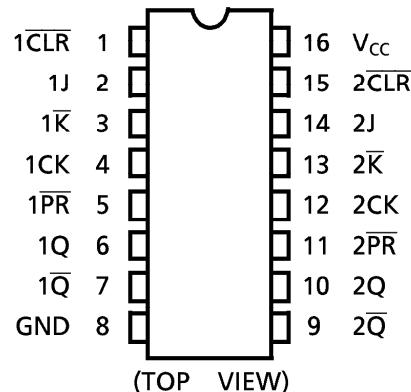

In accordance with the logic levels applied to the J and  $\bar{K}$  inputs, the outputs change state on the positive going transition of the clock pulse.

CLR and  $\bar{P}R$  are independent of the clock and are accomplished by a low logic level on the corresponding input. All inputs are equipped with protection circuits against static discharge or transient excess voltage.

**FEATURES :**

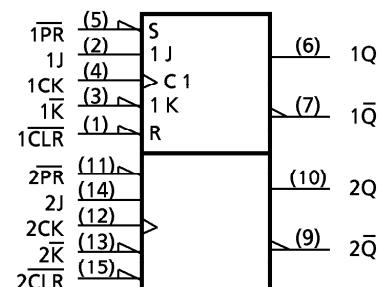

- High Speed..... $f_{MAX} = 63\text{MHz}$  (typ.) at  $V_{CC} = 5\text{V}$
- Low Power Dissipation..... $I_{CC} = 4\mu\text{A}$ (Max.) at  $T_a = 25^\circ\text{C}$
- High Noise Immunity..... $V_{NIH} = V_{NIL} = 28\%$   $V_{CC}$  (Min.)
- Output Drive Capability ..... 10 LSTTL Loads
- Symmetrical Output Impedance...  $|I_{OH}| = I_{OL} = 4\text{mA}$ (Min.)
- Balanced Propagation Delays.... $t_{PLH} \approx t_{PHL}$
- Wide Operating Voltage Range....  $V_{CC}$  (opr.) =  $2\text{V} \sim 6\text{V}$
- Pin and Function Compatible with 74LS109

(Note) The JEDEC SOP (FN) is not available in Japan.

**PIN ASSIGNMENT****TRUTH TABLE**

| INPUTS |            |   |           |    | OUTPUTS     |             | FUNCTION  |

● TOSHIBA is continually working to improve the quality and the reliability of its products. Nevertheless, semiconductor devices in general can malfunction or fail due to their inherent electrical sensitivity and vulnerability to physical stress. It is the responsibility of the buyer, when utilizing TOSHIBA products, to observe standards of safety, and to avoid situations in which a malfunction or failure of a TOSHIBA product could cause loss of human life, bodily injury or damage to property. In developing your designs, please ensure that TOSHIBA products are used within specified operating ranges as set forth in the most recent products specifications. Also, please keep in mind the precautions and conditions set forth in the TOSHIBA Semiconductor Reliability Handbook.

| Maximum Clock Frequency  | $f_{MAX}$              |                | 2.0                | 6         | 17   | —    | 5             | —    |
|  |                        |                | 4.5                | 31        | 59   | —    | 25            | —    |
|  |                        |                | 6.0                | 36        | 67   | —    | 29            | —    |
| Input Capacitance  | $C_{IN}$               |                | —                  | 5         | 10   | —    | 10            | pF   |
| Power Dissipation Capacitance  | $C_{PD}(1)$            |                | —                  | 41        | —    | —    | —             |      |

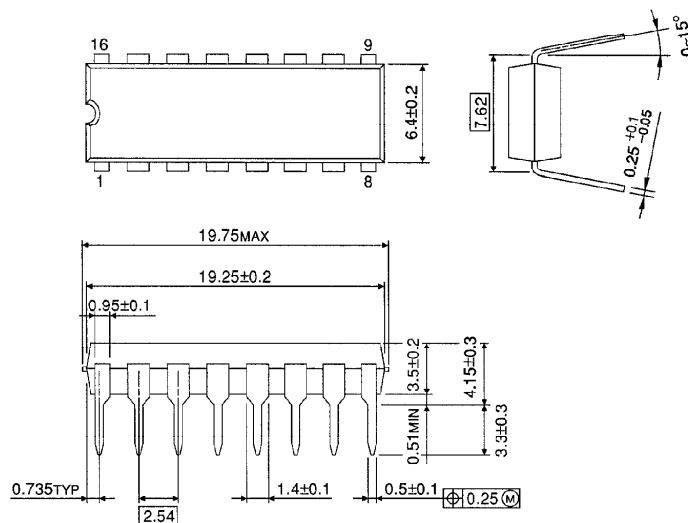

Note (1)  $C_{PD}$  is defined as the value of the internal equivalent capacitance which is calculated from the operating current consumption without load.

Average operating current can be obtained by the equation :

$$I_{CC}(\text{opr}) = C_{PD} \cdot V_{CC} \cdot f_{IN} + I_{CC} / 2 \text{ ( per F/F )}$$

## DIP 16PIN OUTLINE DRAWING (DIP16-P-300-2.54A )

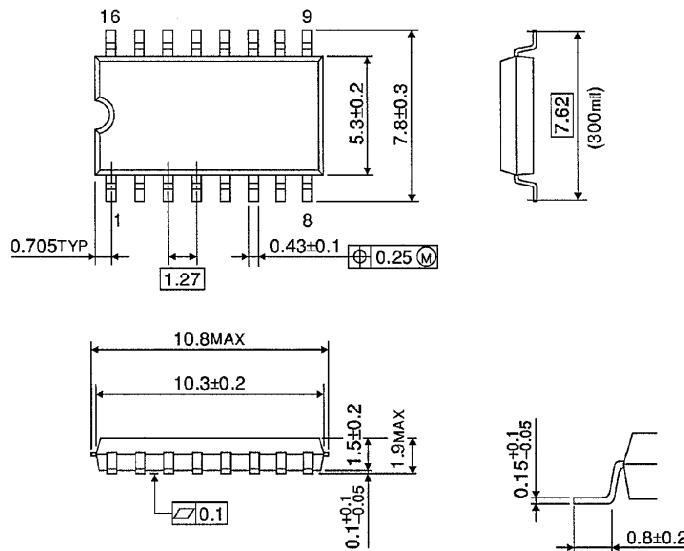

Unit in mm

Weight : 1.00g (Typ.)

## SOP 16PIN ( 200mil BODY ) OUTLINE DRAWING ( SOP16-P-300-1.27 )

Unit in mm

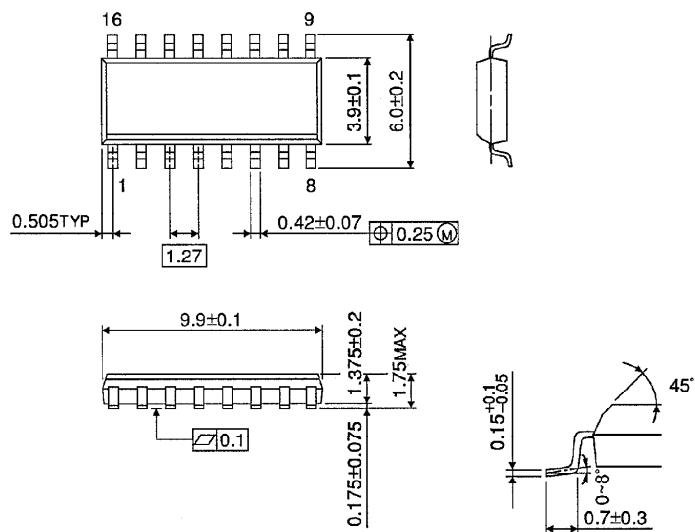

Weight : 0.18g (Typ.)

## SOP 16PIN ( 150mil BODY ) OUTLINE DRAWING ( SOL14-P-150 -1.27)
