TC74HC158AP/AF/AFN QUAD 2 - CHANNEL MULTIPLEXER  
(INVERTING)**

The TC74HC157A and TC74HC158A are high speed CMOS 2 - CHANNEL MULTIPLEXERs fabricated with silicon gate C2MOS technology.

They achieve the high speed operation similar to equivalent LSTTL while maintaining the CMOS low power dissipation.

The TC74HC158A is an inverting multiplexer while the TC74HC157A is a non-inverting.

When  $\overline{\text{STROBE}}$  is held high, selection of data is inhibited and all the outputs become low in the case of HC157A or high in the case of HC158A.

The SELECT decoding determines whether the A or B inputs get transferred to their corresponding Y ( $\overline{Y}$ ) outputs.

All inputs are equipped with protection circuits against static discharge or transient excess voltage.
