

3 - TO - 8 LINE DECODER

The TC74ACT138 is an advanced high speed CMOS 3 - to - 8 LINE DECODER fabricated with silicon gate and double-layer metal wiring C²MOS technology.

It achieves the high speed operation similar to equivalent Bipolar Schottky TTL while maintaining the CMOS low power dissipation.

This device may be used as a level converter for interfacing TTL or NMOS to High Speed CMOS. The inputs are compatible with TTL, NMOS and CMOS output voltage levels.

When the device is enabled, 3 Binary Select inputs (A, B and C) determine which one of the outputs (Y₀ - Y₇) will go low.

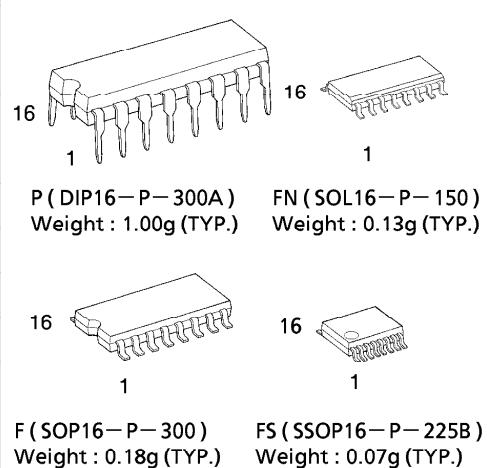

When enable input G₁ is held low or either G_{2A} or G_{2B} is held high, decoding function is inhibited and all outputs go high.

G₁, G_{2A}, and G_{2B} inputs are provided to ease cascade connection and for use as an address decoder for memory systems.

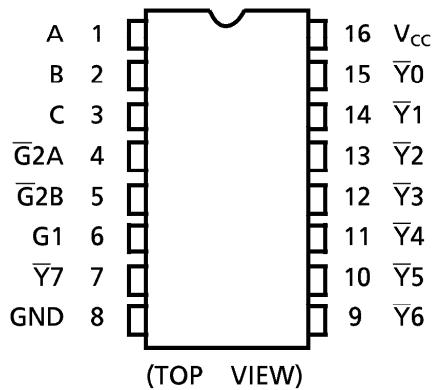

All inputs are equipped with protection circuits against static discharge or transient excess voltage.
