

TOSHIBA CMOS DIGITAL INTEGRATED CIRCUIT SILICON MONOLITHIC

# TC74HC697AP, TC74HC697AF

## SYNCHRONOUS PRESETTABLE 4 - BIT BINARY UP/DOWN COUNTER WITH OUTPUT REGISTER (MULTIPLEXED 3 - STATE OUTPUTS )

The TC74HC697A is high speed CMOS UP / DOWN COUNTERS fabricated with silicon gate C2MOS technology. It achieves the high speed operation similar to equivalent LSTTL while maintaining the CMOS low power dissipation. It counts on the rising edge of the Counter Clock ( CCK ) input when "counter mode" is selected. If the up/down ( U /  $\bar{D}$  ) input is held high, the internal counter counts up. Conversely, if U /  $\bar{D}$  is held low, it counts down.

The internal counters outputs are latched into the output registers on the rising edge of the Register Clock ( RCK ) input.

The outputs ( QA ~ QD ) are selected as either internal counter or registered outputs by the output select ( R /  $\bar{C}$  ) input. When high, the outputs are counter outputs and when low, they are registered outputs.

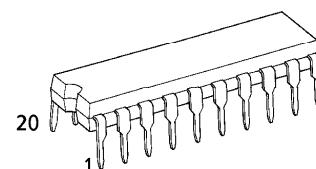

Two enable (  $\bar{ENP}$ ,  $\bar{ENT}$  ) inputs and a carry (  $\bar{RCO}$  ) output are provided to enable cascading of the counters.

This facilitates easy implementation of n - bit counters without using external gates.

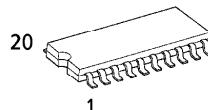

All inputs are equipped with protection circuits against static discharge or transient excess voltage.

### FEATURES :

- High Speed..... $f_{MAX} = 38MHz$  (typ.) at  $V_{CC} = 5V$
- Low Power Dissipation..... $I_{CC} = 4\mu A$ (Max.) at  $T_a = 25^{\circ}C$
- High Noise Immunity..... $V_{NIH} = V_{NIL} = 28\% V_{CC}$  (Min.)
- Output Drive Capability.....15 LSTTL Loads  
For QA~QD  
10 LSTTL Loads For  $\bar{RCO}$
- Symmetrical Output Impedance..|  $I_{OH}$  | =  $I_{OL}$  = 6mA (Min.)  
For QA ~ QD  
|  $I_{OH}$  | =  $I_{OL}$  = 4mA (Min.)  
For  $\bar{RCO}$
- Balanced Propagation Delays ... $t_{pLH} \approx t_{pHL}$
- Wide Operating Voltage Range... $V_{CC}$  (opr.) = 2V~6V
- Pin and Function Compatible with 74LS697

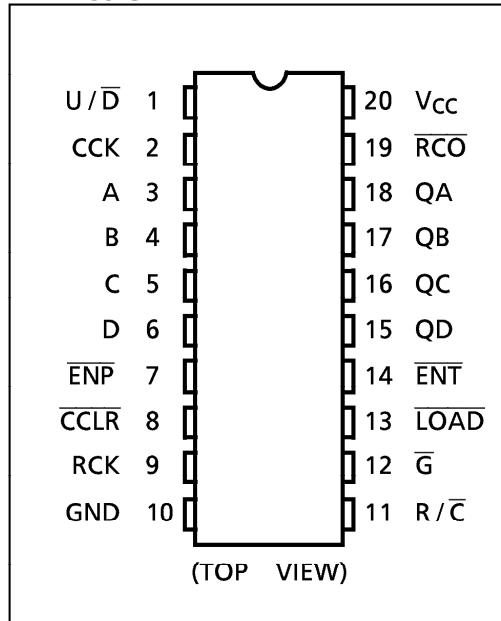

P (DIP20-P-300-2.54A)  
Weight : 1.30g (Typ.)

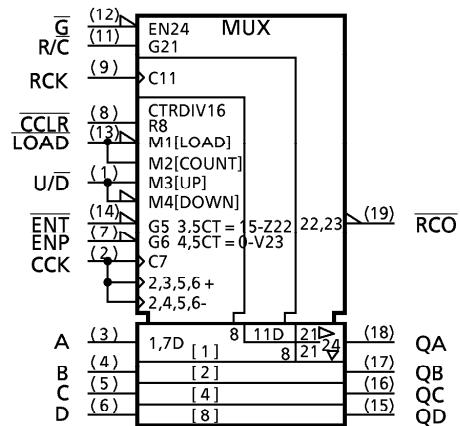

F (SOP20-P-300-1.27)  
Weight : 0.22g (Typ.)

### PIN ASSIGNMENT

● TOSHIBA is continually working to improve the quality and the reliability of its products. Nevertheless, semiconductor devices in general can malfunction or fail due to their inherent electrical sensitivity and vulnerability to physical stress. It is the responsibility of the buyer, when utilizing TOSHIBA products, to observe standards of safety, and to avoid situations in which a malfunction or failure of a TOSHIBA product could cause loss of human life, bodily injury or damage to property. In developing your designs, please ensure that TOSHIBA products are used within specified operating ranges as set forth in the most recent products specifications. Also, please keep in mind the precautions and conditions set forth in the TOSHIBA Semiconductor Reliability Handbook.

| Power Dissipation Capacitance          | $C_{PD}$ (1)           |                         |           | —                   | 72   | —             | —    | —    | pF  |  |

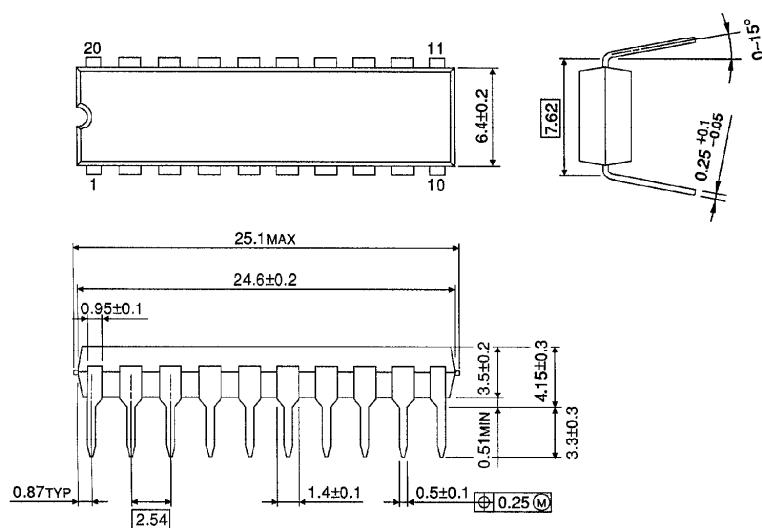

Note (1)  $C_{PD}$  is defined as the value of the internal equivalent capacitance which is calculated from the operating current consumption without load.

Average operating current can be obtained by the equation :

$$I_{CC}(\text{opr}) = C_{PD} \cdot V_{CC} \cdot f_{IN} + I_{CC}$$
