### **Description**

This FGL based, long-haul (up to 250km) 2.5 Gb/s D-WDM transmitter is designed for SONET OC-48 and SDH STM-16 D-WDM applications. It offers a 'plug and play' solution for high speed network designs which allows quick time-to-market for system providers.

The transmitter case temperature must be kept below 70°C to allow reliable operation of the device. Therefore it is recommended, that a heat sink is attached with good thermal connection to the module. E.g. assuming a max. ambient temperature of 40°C, the thermal resistance should be 5°C/W or better. In addition, free air cooling (for vertically mounted module) or forced air cooling (especially for horizontal mounting) is recommended.

## Absolute Maximum Ratings

Stresses in excess of the absolute maximum ratings may cause permanent damage to the device. Exposure to absolute maximum ratings for extended periods can affect the device reliability. The specified performance can be achieved at the operating conditions, listed in this datasheet.
