

Telecommunications Switch
Optocoupler/1 Form A Relay

DESCRIPTION

The TR115 is a dual function circuit designed specifically as a telecommunications switch. It consists an optically isolated solid state relay separated from an optocoupler. The relay portion is composed of an LED on the input, optically coupled to a sensing circuit which drives two source-to-source DMOS transistors. The optocoupler portion of the package consists of two back-to-back LEDs that drive an output phototransistor.
