SLFS027A – NOVEMBER 1970 – REVISED MARCH 1993

- **200-MHz Bandwidth**
- **250-kΩ Input Resistance**
- **Selectable Nominal Amplification of 10, 100, or 400**
- **No Frequency Compensation Required**
- **Designed to be Interchangeable With Fairchild uA733C and uA733M**

uA733C . . . D OR N PACKAGE
uA733M . . . J PACKAGE

description

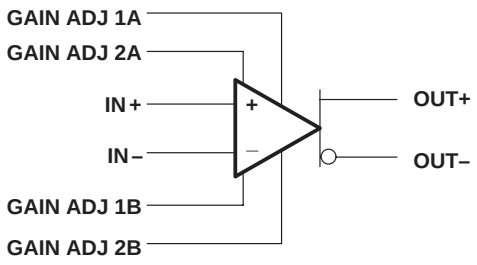
The uA733 is a monolithic two-stage video amplifier with differential inputs and differential outputs.

Internal series-shunt feedback provides wide bandwidth, low phase distortion, and excellent gain stability. Emitter-follower outputs enable the device to drive capacitive loads, and all stages are current-source biased to obtain high common-mode and supply-voltage rejection ratios.

Fixed differential amplification of 10 V/V, 100 V/V, or 400 V/V may be selected without external components, or amplification may be adjusted from 10 V/V to 400 V/V by the use of a single external resistor connected between 1A and 1B. No external frequency-compensating components are required for any gain option.

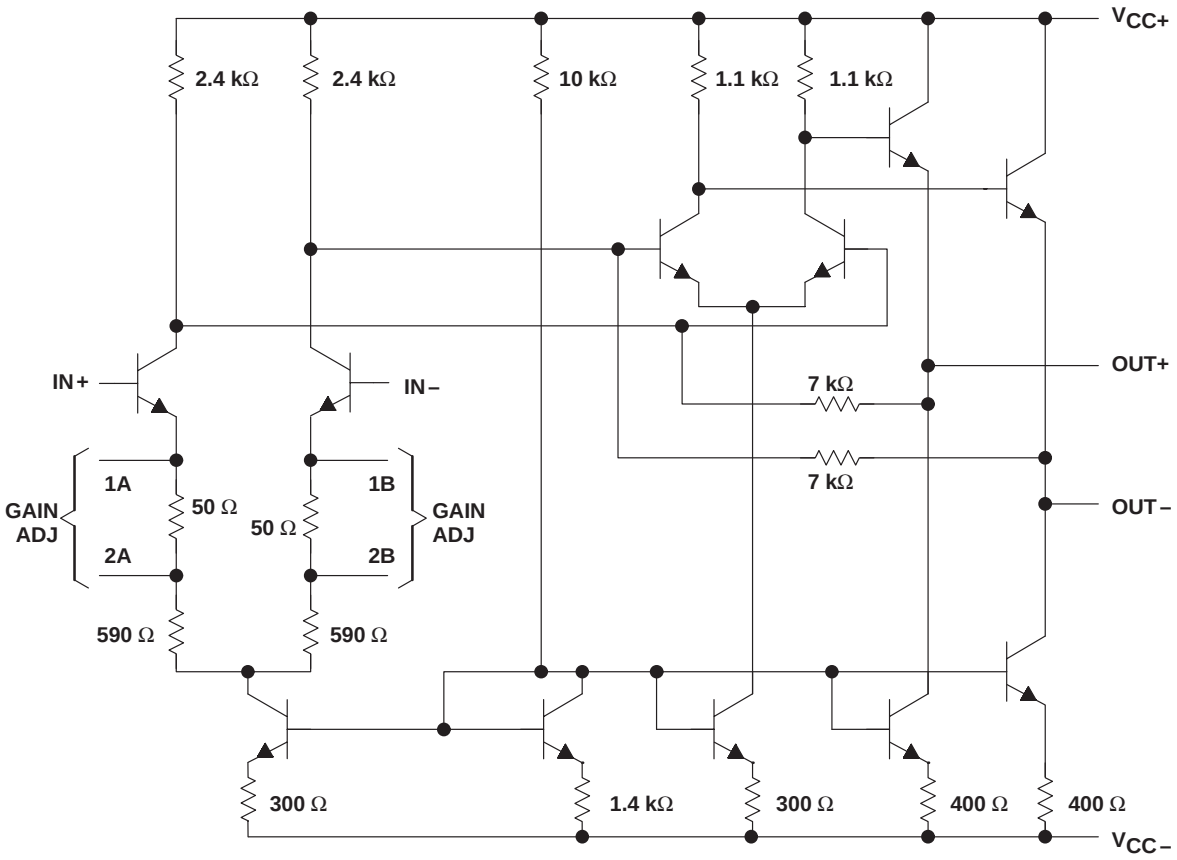
The device is particularly useful in magnetic-tape or disc-file systems using phase or NRZ encoding and in high-speed thin-film or plated-wire memories. Other applications include general-purpose video and pulse amplifiers where wide bandwidth, low phase shift, and excellent gain stability are required.

symbol



The uA733C is characterized for operation from 0°C to 70°C; the uA733M is characterized for operation over the full military temperature range of – 55°C to 125°C.

schematic



Component values shown are nominal.

Component values shown are nominal.

absolute maximum ratings over operating free-air temperature range (unless otherwise noted)†

		uA733C	uA733M	UNIT
Supply voltage V_{CC+} (see Note 1)		8	8	V
Supply voltage V_{CC-} (see Note 1)		– 8	– 8	V
Differential input voltage		± 5	± 5	V
Common-mode input voltage		± 6	± 6	V
Output current		10	10	mA
Continuous total power dissipation		See Dissipation Rating Table		
Operating free-air temperature range		0 to 70	– 55 to 125	°C
Storage temperature range		– 65 to 150	– 65 to 150	°C
Lead temperature 1,6 mm (1/16 inch) from case for 60 seconds	J or U package		300	°C
Lead temperature 1,6 mm (1/16 inch) from case for 10 seconds	D or N package	260		°C

† Stresses beyond those listed under absolute maximum ratings may cause permanent damage to the device. This is a stress rating only, and functional operation of the device at these or any other conditions beyond those indicated in the recommended operating conditions section of this specification is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

NOTE 1: All voltage values, except differential input voltages, are with respect to the midpoint between V_{CC+} and V_{CC-}.

DISSIPATION RATING TABLE

PACKAGE	$T_A \leq 25°C$ POWER RATING	DERATING FACTOR	DERATE ABOVE T_A	$T_A = 70°C$ POWER RATING	$T_A = 125°C$ POWER RATING
D	500 mW	N/A	N/A	500 mW	N/A
J (uA733M)	500 mW	11.0 mW/°C	104°C	500 mW	269 mW
N	500 mW	N/A	N/A	500 mW	N/A
U	500 mW	5.4 mW/°C	57°C	430 mW	133 mW

electrical characteristics, $V_{CC\pm}$ = ±6 V, T_A = 25°C

IMPORTANT NOTICE

Texas Instruments and its subsidiaries (TI) reserve the right to make changes to their products or to discontinue any product or service without notice, and advise customers to obtain the latest version of relevant information to verify, before placing orders, that information being relied on is current and complete. All products are sold subject to the terms and conditions of sale supplied at the time of order acknowledgement, including those pertaining to warranty, patent infringement, and limitation of liability.

TI warrants performance of its semiconductor products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are utilized to the extent TI deems necessary to support this warranty. Specific testing of all parameters of each device is not necessarily performed, except those mandated by government requirements.

CERTAIN APPLICATIONS USING SEMICONDUCTOR PRODUCTS MAY INVOLVE POTENTIAL RISKS OF DEATH, PERSONAL INJURY, OR SEVERE PROPERTY OR ENVIRONMENTAL DAMAGE ("CRITICAL APPLICATIONS"). TI SEMICONDUCTOR PRODUCTS ARE NOT DESIGNED, AUTHORIZED, OR WARRANTED TO BE SUITABLE FOR USE IN LIFE-SUPPORT DEVICES OR SYSTEMS OR OTHER CRITICAL APPLICATIONS. INCLUSION OF TI PRODUCTS IN SUCH APPLICATIONS IS UNDERSTOOD TO BE FULLY AT THE CUSTOMER'S RISK.

In order to minimize risks associated with the customer's applications, adequate design and operating safeguards must be provided by the customer to minimize inherent or procedural hazards.

TI assumes no liability for applications assistance or customer product design. TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right of TI covering or relating to any combination, machine, or process in which such semiconductor products or services might be or are used. TI's publication of information regarding any third party's products or services does not constitute TI's approval, warranty or endorsement thereof.
