

PRECISION VOLTAGE COMPARATORS

DESCRIPTION

The μ PC311 is a voltage comparator that has input currents more than a hundred times lower than devices like conventional standard type of 710. It is also designed to operate over a wide range of supply voltages; from ± 15 V op amp supplies down to the single 5 V supply used for IC logic. Its output is compatible with HNIL, DTL and TTL as well as MOS circuits.

FEATURES

- Operate from single 5 V supply
- Maximum input current: 250 nA
- Maximum offset current: 50 nA
- Fast transient response: 200 ns TYP.

Note 1. Reverse connection of supply voltage can cause destruction.

Note 2. The input voltage should be allowed to input without damage or destruction. Even during the transition period of supply voltage, power on/off etc., this specification should be kept. The normal operation will establish when the both inputs are within the Common Mode Input Voltage Range of electrical characteristics.

Note 3. This specification is the voltage which should be allowed to supply to the output and GND terminal from external without damage or destructive. Even during the transition period of supply voltage, power on/off etc., this specification should be kept.

Note 4. Thermal derating factor is $-5.0 \text{ mV}/^\circ\text{C}$ when ambient temperature is higher than 55°C .

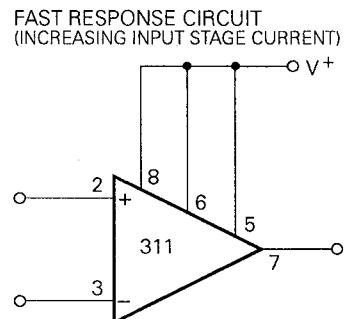

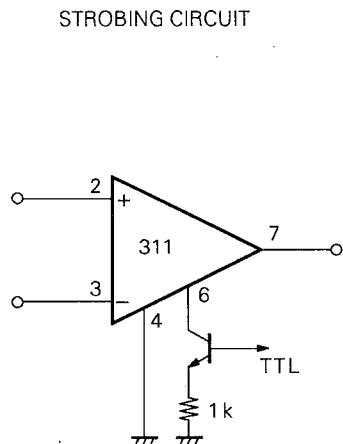

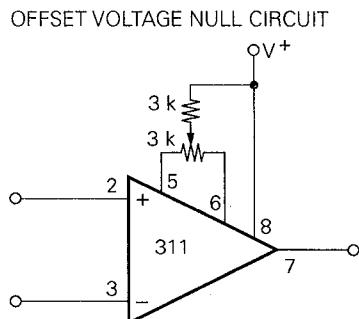

Note 5. Thermal derating factor is $-4.4 \text{ mV}/^\circ\text{C}$ when ambient temperature is higher than 25°C .

Note 6. Pay careful attention to the total power dissipation not to exceed the absolute maximum ratings, Note 4 and Note 5.
